Control an HDMI-enabled computer over IP, with support for RS-232 pass-through and 3.5mm audio

The AVoIP KVM Extender enables remote computer access over a TCP/IP network with a keyboard, mouse, and 4K 60Hz HDMI monitor, keeping systems secure from unauthorized access and physical damage.

Driver-Free Installation

The plug-and-play design requires no drivers or software and is compatible with all major operating systems, including Windows, macOS, and Linux, as well as hardware platforms like Intel, AMD, Snapdragon/ARM, and Apple Silicon.

Scalable, Flexible, and Future-Proof

Designed to grow with your business, the KVM extender supports both one-to-one and one-to-many configurations by adding IP KVM receivers (sold separately), ensuring a flexible and future-ready solution.

Professional-Grade Design

Each unit features a durable metal housing with mounting kits for wall or under-desk installation, plus rubber feet for desktop stability. A local HDMI output on the transmitter allows direct connection to a nearby display, while RS232 and 3.5mm audio passthrough ports enable serial and audio extension.
