R919

CLEAR, COMFORTABLE STEREO FOR EVERYDAY CALLS

The Logitech H151 is a binaural, on-ear headset designed for office and call-center use. Its 20–20,000 Hz frequency response and 22-ohm impedance support clear audio for conversations and everyday listening, while the lightweight 80 g design and adjustable headband suit extended work sessions.

PLUG IN AND GET CONNECTED

A wired 3.5 mm connection makes the H151 compatible with a wide range of devices equipped with the same jack. The 1.8 m black cable provides room to move at a desk, and the headset is supported by Windows and Mac operating systems. It also works with popular calling applications across

platforms.

BOOM MICROPHONE WITH CONVENIENT CONTROLS

The boom microphone captures speech with a 100–6,500 Hz frequency response and -44 dB sensitivity. Its noise-reduction feature helps limit background sound, while the foldable design keeps it out of the way when not in use. An in-line control unit provides buttons, a rotary volume control, and microphone mute.

PRACTICAL DESIGN FOR THE WORKPLACE

Finished in black, the H151 combines a straightforward headband fit with supra-aural earcups for a compact office-ready profile. The headset is supplied with documentation and a user guide, giving users useful setup information for connecting and operating its wired controls.
