media projects, or lightning-fast system backups, the Diamond Case 1980 delivers uncompromising reliability and speed for those who refuse to settle for less.

Faster than you've ever seen

With Thunderbolt™ 5 technology, transfer rates can reach an astonishing 80 Gbps, letting you move even the largest files in seconds. From editing 8K footage to backing up complex datasets, this enclosure keeps your work flowing without lag or slowdown. It's the future of high-speed connectivity, built for today's creators.

Room for everything

Expand your digital workspace with support for NVMe SSDs up to 8 TB in size. Perfect for professionals handling large creative projects, system images, or massive data libraries. The Diamond Case 1980 transforms your portable drive into a full-scale, high-capacity solution that travels anywhere your workflow takes you.

No ice packs needed

A compact but powerful built-in fan keeps your drive cool even under intense workloads. By maintaining optimal operating temperatures, it prevents performance drops and extends the life of your SSD, because peak performance shouldn't come with compromise.

Rock solid

Crafted from durable aluminum, the Diamond Case 1980 doesn't just look premium, it feels it. The sturdy shell protects your SSD from physical shocks while efficiently dispersing heat. It's solid, stylish, and built to stand up to daily use in professional environments.

All done by hand

No more fiddling with screws or extra tools. The enclosure's toolless mechanism lets you install or swap drives in seconds. Whether you're testing, cloning, or upgrading, the setup is straightforward and frustration-free, ready for action whenever you are.
