

CyberPower RMCARD205 UPS accessory

Model: RMCARD205

Manufacturer: CYBERPOWER

EAN: 4712364141089

Product Code: 1584542

R3,402

A full-featured network management card, the CyberPower RMCARD205 remotely manages, monitors, and controls CyberPower OR and PR Series UPS systems and ATS PDUs via a standard web browser or network management system (NMS) connection. Especially suited to enterprise installations where the administrator might not be onsite, the RMCARD205 provides scheduling for UPS shutdown, startup, and rebooting, along with event action settings, event logging, and automatic event notification sent via Email, SMS, SNMP Traps, or Syslog. Our PowerPanel® Business Edition Client auto-shutdown software protects servers and workstations from data loss due to power failure. The MD5 security management safeguards the integrity of the network.

An optional environmental sensor (ENVIROSENSOR) can be added to RMCARD205 to monitor the ambient temperature and humidity of a server room, IT closet, or other critical environment. Administrators define temperature parameters in Fahrenheit or Celsius; rising temperatures will prompt the RMCARD305 to send a predefined notification. The RMCARD205 comes with a three-year warranty.
