monitor.

Multi-touch

The multi-touch functionality is supported under Windows® 7/8 only.

IPS

IPS technology offers higher contrast, darker blacks and much better viewing angles than standard TN technology. The screen will look good no matter what angle you look at it.

Touch technology - capacitive

This technology uses a sensor-grid of micro-fine wires integrated into the glass that covers the screen. Touch is detected because electrical characteristics of the sensor grid change when human finger is placed on the glass. Thanks to the glass overlay this technology is highly durable, and the touch function remains unaffected even if the glass is scratched. It offers perfect picture performance and will work with human finger (gloved or not) and magnetic ball.

VESA

VESA mount compliance means you can easily mount the touchscreen to any mounting that complies with the VESA standard.

Key Lock

You can easily lock and unlock the controls preventing unauthorised changes to settings you made.
