Thanks to the special privacy filter integrated into the protective glass, the display light is only transmitted from a certain viewing angle. This means that the screen appears black from a viewing angle of 30° or more. The glass thus offers effective protection against side glances from, for example, seat neighbours on trains, planes or buses. And all of this, of course, without any negative impact on colour fidelity or display quality. So if you use your smartphone to store and edit sensitive data - whether for business or private use - the Privacy Glass is an option worth considering.

Full screen coverage

Compared to the so-called 2D protective glasses, Displex Full Cover protective glasses cover not only the active display area, but the entire display area. This means optimum protection of the entire display and an improved user experience: maximum protection without annoying edges.
This feature is particularly advantageous for smartphones with rounded displays. Since the screen protector adapts perfectly to the rounded display and thus protects the entire display area.

Tempered glass with rounded edges

All Displex protective glasses have a surface hardness of 10H and are therefore not only more scratch-, break- and shock-resistant than comparable brand products, but even surpass sapphire glass, which is used in luxury watches and has a hardness of 9H.
Even the edges, the area of the smartphone and protective glass most susceptible to breakage and impact, are specially hardened, rounded by 4-fold polishing and finished with a shock-absorbing edge. This elaborate production process further increases the protection against knocks and bumps and allows a particularly pleasant use of the smartphone. With these features, the protective glass is extremely resistant and guarantees maximum breakage resistance.

Case-friendly

Our Displex protective glass is manufactured to within 5/100 mm of the smartphone contours and therefore fits perfectly on your smartphone. In addition, the protective film is ultra-thin at 3mm. This means that all standard-sized protective cases can be used with the screen protection glass. Thus, your smartphone is optimally protected all around by a combined protection of the Displex Tempered Glass and your favourite case.

Anti Fingerprint

The top layer of our 5-Layer Technology consists of a high-tech plasma coating. The hydrophobic anti-fingerprint coating is grease and dirt repellent, extremely long-lasting and ensures optimal touch and scrolling. This technology not only makes your display look better, it also keeps it clean longer, so it requires less frequent cleaning.

High-tech splinter protection

The high-tech shatter protection integrated in the Real Glass from Displex guarantees absolute safety even if the protective glass breaks. Thanks to the composite material of the second layer in the protective glass, it does not shatter and thus guarantees absolutely safe use. If the worst should come to the worst and the protective glass has absorbed a blow, fall or impact and is broken, the Displex protective glass can be easily pulled off the display in one piece thanks to the integrated high-tech shatter protection.

High-performance adhesive

Once the protective glass has been fitted, the high-performance adhesive ensures optimum adhesion properties and a clear look. The adhesive is adapted to all display coatings of the various manufacturers so that the protective film for mobile phones holds reliably in the long term. The visual appearance is not affected either: despite the screen protection film, you can enjoy gripping videos and photos with maximum transparency and colour fidelity.

Simple & bubble-free application

With the EASY-ON® Eco Mounting Frame and the accompanying video tutorials, mounting the tempered glass is incredibly quick, easy and precise. In addition the EASY-ON® Eco Mounting Frame is made of premium solid cardboard and is therefore not only sustainable, but also a 100% recyclable. The result is worth seeing: no crooked positioning of the screen protector on the display, no concealed openings for speakers or microphones and certainly no bubbles under the protective glass.
