See how the Canon EOS RP performs in the hands of enthusiasts and discover how they use the benefits of full-frame mirrorless plus EF and EF-S lenses to capture images packed with detail and depth.

A lightweight body with a faster, smarter lens mount

The Canon EOS RP is a practical, creative full-frame mirrorless camera with enormous creative potential thanks to the next generation RF lenses. The wide diameter, high communication speed and short back focus of the RF mount is the perfect starting point for your future full-frame system.

A new standard in full-frame image quality

The Canon EOS RP 26.2 Megapixel CMOS sensor works incredibly in low light thanks to a DIGIC 8 processor and in-camera DLO that give superb results direct from camera.

Shoot in a new way

The Canon EOS RP offers a new way of embracing the benefits of full-frame. Shoot with the dedicated range of full-frame RF lenses as well as the wide range of EF and EF-S lenses via adapter without compromising optical performance.

EOS handling with no compromise

A comfortable EOS style grip alongside a high resolution Vari-Angle touch screen and OLED electronic viewfinder inspires next generation handling in a lightweight 485g body.

Focus anywhere in an instant

Dual Pixel CMOS AF offers an extended AF area as well as the world’s fastest AF speed2 at just 0.05 seconds over 4779 selectable AF positions, plus low light AF down to -5 EV3. Eye AF keeps your portraits sharp while focus bracketing offers maximum depth-of-field right across an image.
