

Moza Racing ES Wheel (12inch)

Model: RS046

Manufacturer: MOZA RACING

EAN: 6973137270445

Product Code: 1651615

R2,191

12-inch Round Wheel Mod

This round wheel mod has a diameter of 12 inches or 305mm, which is 25mm larger than the original ES wheel. The increase in size brings the wheel closer to the dimensions of a real car, providing a more realistic driving experience. This modification is particularly great for drifting enthusiasts!

Ergonomic Design

The grips located at the 3 o'clock and 9 o'clock positions have been thoughtfully designed without any stitching in order to maximize the sensation of the hand while preventing any discomfort that might arise from friction between the thumbs and stitches.

Microfiber Leather Grips

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The grips utilize microfiber leather and are crafted with exquisite hand-wrapping techniques.

Aluminum Wheel Rim

Using aviation-grade aluminum alloy, the wheel rim mod is durable and rigid.

Lightweight Design

The wheel rim mod has a remarkably low weight of 850g and weighs about 1.4kg with the button box. This low weight reduces its moment of inertia, improving its responsiveness and ability to reproduce road details.

Shifter Paddle Extension Block

We've included shifter paddle extension blocks in the package to ensure a comfortable driving experience with the larger wheel rim mod. You won't have to worry about the extended distance between the wheel rim and your hands.
