

NordVPN Standard 1 year(s)

Model: NV1C1YESDEU

Manufacturer: NORDVPN

Product Code: 1662289

R1,888

What is a VPN? A virtual private network routes your internet traffic through a secure tunnel, changing your virtual location in the process. But NordVPN is more than just a VPN — we also offer powerful anti-malware tools.

NordVPN's Threat Protection feature scans your downloaded files for malware and blocks trackers, ads, and dangerous websites. Experience the internet without intrusive tracking or censorship. Stay secure on Wi-Fi networks and stop your mobile apps from leaking unencrypted data. Get it all with just the click of a button.

Threat Protection

NordVPN's Threat Protection feature makes you much safer from online threats. Turn it on, and Threat Protection will block intrusive ads and trackers, scan URLs to protect you from dangerous websites, and inspect downloaded files for malware.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Experience internet freedom

Studying or traveling abroad? NordVPN has more than 6,300+ secure VPN servers in 100+ countries. Enjoy a fast and reliable connection wherever you go and access favorite online content even when abroad.

Block dangerous websites

NordVPN's Threat Protection scans URLs before you enter a website. If a website you're about to visit contains malware, trackers, spyware, or other malicious software, Threat Protection automatically blocks it.

Secure your connection on Wi-Fi networks

Wi-Fi networks, if not properly configured, can be extremely vulnerable to hacking. NordVPN encrypts your internet traffic, so even if the Wi-Fi network you connect to isn't secure, you remain protected.

The fastest VPN on the planet

NordVPN has combined the speed and leanness of WireGuard™ with its in-house security expertise to create NordLynx, the fastest VPN protocol available.

Avoid intrusive ads

The advanced Threat Protection feature blocks intrusive advertisements the moment you enter a website. Browse your favorite websites without distractions.

Dark Web Monitor

The Dark Web Monitor feature scans the dark web for any login details associated with your email address and sends you an alert if there's a hit. That way, you can immediately change your passwords and protect your accounts before cybercriminals do damage.

Extra features for extra security

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

NordVPN boasts a wide range of features to protect you from cyber threats. In addition to Threat Protection, there is an automatic Kill Switch that blocks your internet connection if your VPN connection drops, ensuring that your data stays safe. Double VPN will help when a high level of online security is required due to government censorship and strict internet regulations. You'll be protected from DNS leaks, too.

Possibility to enable auto-renewal

NordVPN Standard services you'll activate with this code are not subscription-based (i.e. the services will end after the indicated period, if you do not enable the auto-renewal manually). If you wish to enable auto-renewal, choose this feature during the activation process of NordVPN Standard services or log into your Account, tap on the "Billing" icon and select "Subscriptions" section.

Auto-renewal can be activated anytime, but no later than 14 days before the expiration of NordVPN Standard services.

When auto-renewal is enabled, the subscription of NordVPN Standard services is automatically renewed for an additional 1 year period annually after the initial subscription ends.

In such a case, the user receives a charge reminder in advance and is automatically charged 14 days before the auto-renewal (i.e. the start of the upcoming subscription period). Subscription renewal prices can be found in this link: <https://my.nordaccount.com/legal/pricing/>
