

MOVA M50 Wet and Dry Vacuum

Model: HMM66A

Manufacturer: MOVA

EAN: 6978794731995

Product Code: 1664003

R5,267

MOVA M50 Wet and Dry Vacuum

The MOVA M50 is a wet & dry mop vacuum cleaner that combines very high suction power of 22,000 Pa with intelligent adjustment of operation to the type of dirt. The device allows you to vacuum and wash floors at the same time, offering up to 46 minutes of operating time and an advanced self-cleaning system with 90°C hot water brush washing and quick drying. This solution is designed for effective and convenient cleaning of everyday dirt, both dry and wet.

Powerful suction and cleaning without compromise

With a suction power of up to 22,000 Pa, the MOVA M50 effectively deals with spilled liquids, dust, crumbs, and dried stains. During operation, the device exerts a pressure of approximately 20 N on the floor, which increases the effectiveness of scrubbing and facilitates the removal of stubborn dirt. What's more, the Lie-Flat Reach design allows you to lay the vacuum cleaner almost flat (up to 180°) and get under furniture as low as 14 cm. This makes it possible to thoroughly clean the space under beds, sofas, or cabinets without having to bend down or move furniture.

Effective hair collection and thorough cleaning along edges

The high-density comb scraper effectively captures hair and fur, preventing it from winding around the roller. This is the perfect solution for pet owners! In addition, a specially designed brush allows cleaning right up to walls and baseboards with a distance of 0 mm. This prevents dust and dirt from remaining along the edges and ensures that the entire floor surface is cleaned evenly.

Intelligent dirt detection

The MOVA M50 vacuum cleaner is equipped with a dirt sensor that recognizes the type and degree of contamination. In intelligent mode, the device automatically adjusts the suction power and amount of water, ensuring optimal cleaning efficiency while maintaining efficient energy consumption.

Hygienic separation of solid and liquid contaminants

The solid and liquid waste separation system makes maintenance of the device simpler and more hygienic. Used water and solid contaminants are separated, which facilitates emptying the tank and reduces contact with dirt.

Self-cleaning with hot water and quick drying

After cleaning, the brush roller is washed with 90°C water, which effectively removes grease, deposits, and bacteria. The device then starts the hot air drying process. There are two modes available: fast dries the roller in about 5 minutes, and quiet dries it in about 15-30 minutes with a lower noise level.

Convenient operation

When moving across the floor, the device weighs only about 610 g, which translates into very smooth and light handling. What's more, the ability to rotate the brush 90° makes it easier to maneuver around furniture legs and in tight spaces, making cleaning less tiring.

Included in the set
