PXN two-mode gearbox (H + sequential)

The PXN SF SH dual-mode gearbox is designed for driving simulation fans who want maximum realism and precision. The unit allows you to switch between H-pattern mode (8 gears + reverse) and sequential mode, so you can adjust your driving style to your favorite game and your own preferences. Robust metal construction and adjustable shift force ensure durability and full control during dynamic racing.

Dual mode operation

The mode switch allows you to quickly change the way the lever works. In H-pattern mode you have up to 8 gears plus reverse, which is great for road and rally car simulations. Sequential mode, on the other hand, provides fast, linear gear shifts, ideal for track racing.

The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Adjustable shift force

Thanks to the adjustment screw, you can adjust the resistance of the lever to your preference. Simply use the included allen wrench to increase or decrease the force needed to shift gears. This guarantees an even more realistic experience and full control.

Stable mounting and high compatibility

The gearbox can be securely mounted to the simracing stand with allen screws. The unit works with a PC running Windows 7/8/10/11 and PXN bases, connecting via USB-C. This makes setup quick and hassle-free.

Included:

- Two-mode gearbox
- USB-C to USB-A cable
- USB-C to USB-C cable
- RJ11 to RJ11 cable
- Gear shift knob
- Wrench
- M5 Hex bolts ×4
- TM5×15 Allen screws ×4
- Allen wrench

Manufacturer	PXN
Model	SF SH
Connection method	wired
USB power supply	5V
Current consumption	50 mA max
Dimensions	approx. 175 × 257 × 105 mm
Weight	approx. 2320 g
