DDPAI MINI Pro Wi-Fi 3K Dash Cam

The DDPAI MINI Pro 3K dashcam records video in 3K resolution (2880 × 1620 pixels). The device features a lightweight design weighing 64.2 g and lacks a built-in screen. The device is equipped with a USB Type-C port with input specifications of 5V 2A and supports microSD memory cards with capacities up to 256 GB. Wireless connectivity relies on Wi-Fi modules operating in the 2.4 GHz and 5 GHz bands, compatible with smartphones running Android and iOS. A complete set of mounting accessories allows for quick installation on the vehicle’s windshield.

Precise Recording in 3K Resolution

The DDPAI MINI Pro 3K dashcam records video at a resolution of 2880 × 1620 pixels. The 3K format ensures a high level of detail along the route and makes it easier to read the license plates of passing vehicles. The increased number of pixels results in a clear depiction of key details of the road environment under varying lighting conditions. The video footage retains the sharpness

necessary for a proper assessment of traffic incidents. The recorded files serve as clear evidence in the event of a collision or a disputed situation on the road.

Discreet design without a built-in screen

The device weighs just 64.2 g and is completely devoid of a traditional LCD display. Its compact size allows the camera to be mounted directly behind the vehicle’s rearview mirror. This placement ensures that the dashcam’s housing does not obstruct the driver’s field of view through the windshield. The absence of a backlit screen minimizes distractions while driving at night. Its compact design also ensures that the dashcam remains virtually invisible from outside a parked car.

Wireless Control via the App

The dashcam is operated using the dedicated DDPAI mobile app, available for Android and iOS. The software allows you to view a live feed from the camera directly on your smartphone screen. Through the app, the driver can conveniently adjust the dashcam’s settings. The wireless file download feature allows you to immediately save recordings to your phone’s memory. Camera management is fully intuitive, with no need to use physical menu buttons.

Supports storage media with a capacity of up to 256 GB

The device is equipped with a microSD card slot that supports storage media with a maximum capacity of 256 GB. The large storage capacity allows you to archive many hours of footage recorded in 3K resolution. The camera uses loop recording, overwriting the oldest footage with new data when the card is full. Compatibility with high-capacity cards reduces the need for manual formatting. This solution ensures uninterrupted recording during long trips.

Modern Power Supply via USB Type-C Connector

A symmetrical USB Type-C power port is responsible for supplying power to the camera. The device operates based on standard input parameters of 5V 2A. The factory package includes a matching power cable and a car charger that plugs into the cigarette lighter socket. The use of a modern USB-C connector makes it easy to plug in the cable without risking damage to the socket. The power supply standard ensures the dashcam operates continuously while driving.

Multifunctional LED Indicator

The dashcam’s housing features an integrated LED that indicates the device’s current status. This indicator informs the driver when recording is active and when the device is in parking mode. The LED light also indicates when a firmware update is in progress. In the event of a system error or a problem with the memory card, the indicator immediately alerts the user. This feature allows you to quickly verify that the camera is working properly without having to reach for your phone.

Included in the set

- DDPAI MINI Pro 3K dashcam
- USB car charger
- Power cable
- Electrostatic windshield sticker
- 3M adhesive tape / sticker
- Tool for prying up trim and routing cables
- User manual

Manufacturer	DDPAI
