Master Grip Mount for iPhone 17 Pro All-in-One Kit: Light + Filter

Model: P5-MCS-12-TIP

Manufacturer: TELESIN

EAN: 6974944466229

Product Code: 1695070

R2,831

Master Grip Mount for iPhone 17 Pro – Extended Kit

The TELESIN Master Grip for iPhone 17 Pro is a camera grip featuring a MagSafe magnetic mount (32N), a built-in 3200 mAh battery, and a passive graphene cooling system with a surface area of 7600 mm², which improves heat dissipation by up to 25%. Thanks to the physical Bluetooth shutter button, precise zoom dial (0.1x in photo mode, 1–3x smooth zoom in video mode), and integration with the Reef Color app, you gain greater control over your shots without constantly using the screen. It’s a practical solution for those recording on the go but without stabilization features like a gimbal.

Ergonomic grip and greater control

The design, inspired by classic cameras, makes the grip fit better in your hand and provides a more natural resting place for your fingers. This prevents the phone from “shaking” in your hand while recording, which directly translates to steadier shots and fewer minor vibrations visible in the footage. During extended use, this also makes a difference in comfort—your hand gets less tired than when holding just the smartphone. The contoured thumb rest and proper balance of the grip help maintain a secure hold even when recording with one hand. In practice, this means greater control over the frame and a lower risk of accidentally swiping your finger across the screen, which often happens when holding a phone in the standard way. This allows you to focus on the shot rather than on correcting your grip.

Physical controls just like on a camera

The two-stage shutter button lets you focus first, then take a photo or start recording. The zoom dial operates with high precision—in photo mode, it allows for 0.1x increments, and in video mode, it offers a smooth, cinematic zoom range of 1–3x. When paired with the Reef Color app, you can also assign functions to the Fn button, customizing the grip to suit your own workflow.

Passive graphene cooling

A 7600 mm² graphene panel aids in heat dissipation, helping to maintain stable performance during high-quality recording. The design with ventilation holes further improves airflow, allowing the device to heat up more slowly.

Extra battery and secure mounting

The built-in 3200 mAh battery significantly extends recording time, which is especially important for high-resolution video. When recording at 4K/60fps, you can gain up to about an hour of extra time, so you’ll need to pause less often to recharge your phone. This gives you greater freedom when recording on location, traveling, or during longer takes where continuity is key. The 32N MagSafe magnetic mount ensures a stable and secure hold on your phone. In practice, this means your iPhone stays in place even when changing the recording angle or making dynamic hand movements. This allows you to focus on the shot without constantly checking if the phone is securely mounted, which increases comfort and a sense of security while working.

Materials and Construction

The CNC-machined aluminum housing ensures a sturdy build and better resistance to daily wear and tear. The rigid frame ensures the mount does not bend under pressure and remains stable even during more intense use, which is important when recording on the move or mounting additional accessories. The Eco Silicone Leather finish improves grip comfort and prevents the mount from slipping in your hand. The material is pleasant to the touch yet more wear-resistant than traditional plastics, making it well-suited for both daily use and outdoor filming. As a result, the entire unit is more practical and less prone to accidentally slipping out of your hand.

Expandability and Vertical Mode

The mount can be expanded with additional accessories thanks to a 1/4" thread and a magnetic filter system. The design also allows you to position your phone in vertical mode (vertical stand), so the mount can serve as a stable stand—useful when recording content for TikTok, Reels, or Shorts without a tripod.

A comprehensive, ready-to-use kit

The set includes not only the TELESIN Master Grip mount itself with a built-in 3200 mAh battery and Bluetooth control, but also a complete set of accessories that immediately expand its capabilities. The dedicated case is designed to support a stable magnetic connection while improving heat dissipation, which is important during extended recording sessions. The included magnetic fill light allows you to quickly improve scene lighting or illuminate your face while vlogging, without the need for additional equipment. The UV filter protects lenses from scratches and can also improve image quality in challenging conditions. The set is rounded out by a wrist strap that enhances safety when working on the move, and a USB-C cable for charging the grip and accessories.

Included

- TELESIN Master Grip
- Dedicated case
- Magnetic fill light
- UV filter

- Wrist strap
- Charging cable
- User manual

Manufacturer	Telesin
Model	Master Grip Creator Combo
Compatibility	iPhone 17 Pro
Cooling system	Passive graphene panel 7600 mm² (+25% efficiency)
Battery capacity	3200 mAh (up to approx. +1 hour of 4K/60fps recording)
Mounting	MagSafe, magnetic force 32N
Material	CNC aluminum + Eco Silicone Leather
Controls	two-stage shutter release, zoom dial (0.1x photo / 1–3x video), Fn button
Connectivity	Bluetooth
Ports	USB-C + magnetic charging connector
Mounting	1/4" tripod thread
Additional features	vertical mode (vertical stand)
Extensions	support for magnetic filters (optional)

Kind: Holder , Purpose: For phones, With charger: Yes, GPSR Link: https://psr-assets.innpro.pl/gsm_accessories/sg_gsm_accessories_others.pdf, Box length: 21,50, Box width: 11,00, Box height: 8,00, Gross weight: 680, Last delivery: 04.11.2026, Net weight: 520
