

Netatmo Additional Smart Indoor Module

Model: NIM01-WW

Manufacturer: NETATMO

EAN: 3700730500203

Product Code: 1696514

R2,653

Monitor the indoor environment of an additional room of your choice

Would you also like to take readings in your bedroom or bathroom? We think you've got the right idea! Every room is different and requires special attention. The Netatmo Weather Station can monitor up to three rooms using Additional Smart Indoor Modules. Access temperature, humidity, and air-quality (CO_2) readings for each room in real time via your smartphone.

View your data history to understand changes in the room over time

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Use your Additional Module to access past data collected for each room. Changes in the environment are easy to understand using charts in the app. Humidity problems in the bathroom? Monitor how that evolves over time. Having trouble sleeping? Check recent air quality readings for your bedroom.

Customize your notifications to choose which alerts you receive

The Additional Indoor Module supplies you with information on environmental conditions in the rooms of your choice. Would you like to know if your child's bedroom is always a healthy environment? Set your alerts and receive the information that matters most to you via your smartphone – from excessively high CO2 levels to a drop in temperature or increased humidity.

Optimize your well-being using readings made in each additional room

Your Additional Indoor Module takes over from your Smart Weather Station in the room where you place it and can really make your home more comfortable. Based on its readings, you can adjust your heating or open a window to reduce humidity or air pollution.

Improve air quality in additional rooms

As we spend much more time indoors than out, it’s important to think about the air we breathe inside our homes, depending on how we use each room. For example, a poorly ventilated bedroom fills with CO2 at night, leaving you tired when you wake up. The Additional Indoor Module provides real-time air-quality readings for your chosen rooms. Right, it’s time to open some windows!
