mastery.

Under the hood

THE ANTI-DRIFT MAGNETIC REVOLUTION

Approved by gamers, H.E.A.R.T. (HallEffect AccuRate Technology) embodies Thrustmaster’s 15 years of expertise in Hall Effect technology, applied to high-end joysticks for flight simulation. The integration of H.E.A.R.T. into ESWAP X2 H.E ensures next-level precision that won’t decrease over time — while preventing drifting, thanks to measurement of mini-stick movements and position via magnetic sensors.

AT THE HEART OF PRECISION

H.E.A.R.T. (Hall Effect) technology tracks the position and movements of your mini-sticks with surgical precision, accurate to within 0.01 degrees. It delivers truly mind-blowing responsiveness, faithfully reproducing your every move. A real revolution compared to traditional mini-sticks, this technology makes all the difference — especially in games where precision is crucial.

NEXT-LEVEL RESPONSIVENESS

You’ll instantly be won over by the exceptional responsiveness of the mechanical buttons, besting the speed of traditional membrane-based buttons by 64%*. Enjoy greater responsiveness and execute your actions faster than your opponents, thanks to an activation distance reduced to just 0.01″ / 0.3 mm.

TAILORED TO YOUR GAMEPLAY

The ESWAP X2 H.E gamepad adapts to your gaming style, for customized control and handling. Thanks to Hot-Swap technology, you can change the gamepad’s modules in a flash, at any time. Choose between a symmetrical or asymmetrical configuration for the mini-sticks, or explore other layouts to find the one that’s the best fit for your gaming style!

EXPAND YOUR ARSENAL

Free yourself from the limitations of traditional gamepad buttons and vastly increase your action options with ESWAP X2 H.E. You can directly remap any function to one of the 4 additional buttons on the back of the gamepad. Optimize your gaming style with more buttons.

CREATE AND USE YOUR OWN STYLE

Take control of the gamepad thanks to the ability to fully configure ESWAP X2 H.E’s sensitivity levels and settings. With the ThrustmapperX software, you’re free to customize the sensitivity levels of the mini-sticks, as well as the activation travel for the triggers, and remap all of the gamepad’s buttons — to suit your preferences and gaming style.
