Zyxel GS1100-16 network switch Black

Model: GS1100-16

Manufacturer: ZYXEL

EAN: 4718937571390

Product Code: 1733218

R2,359

IEEE Energy-Efficient-Ethernet (EEE) compliance

The ZyXEL GS1100-16 offers environmental efficiency with Gigabit Ethernet speeds critical for next-generation network applications. To comply with the IEEE802.3az standard, the GS1100-16 provides power saving functions to reduce energy consumption to help business save cost.

- Inactive link detection

The power usage adjustment feature automatically reduces power usage when any shut down network device or inactive link is detected. That is, power consumption of the Series can be adjusted according to the link status or the number of active network devices when possible.

- Cable length detection

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.
itworkup.co.za | sales@itworkup.co.za | +27 (11)541-9950

The devices equipped with this green feature can automatically detect the length of connected Ethernet cables and adjust power usage accordingly. The shorter the cable length, the less power it consumes.

Fanless design

Since the fanless design ensures quiet operation in small office spaces, the GS1100-16 is the perfect solution for small business and SOHO office deployments.

Gigabit to the desktop

The GS1100-16 comprises of unmanaged Gigabit switches that provide an inexpensive desktop Gigabit solution for significant performance boost thanks to the higher network bandwidth. The GS1100-16 comes in desktop, wall-mountable or rack-mountable enclosure design is an ideal solution for bandwidth-intensive applications such as high-resolution photo transmission, video/audio streaming and downloading as well as server farm connections.

Power-packed delivery

With the non-blocking switching architecture, the GS1100-16 filters and forwards packets at wire speed for maximum throughput. Features such as Address learning and aging, 802.3x flow control adjust traffic congestion and ensure reliable data transmission. The GS1100-16 also supports jumbo frames of up to 9k bytes for extra large transfers.

Easy installation

The GS1100-16 offers plug-and-play connectivity and easy installation. With the Auto-MDI/MDI-X feature, it eliminates the need for crossover cables when connecting to another switch or hub; the Auto-negotiation feature senses the link speed of a network device and intelligently adjusts for compatibility and optimal performance.
