Fujitsu UPS devices ensure high-performance power supply protection for systems and data, and thus provide reliable protection against power failure, current fluctuations and electrical interference. Fujitsu offers both line interactive (VI) and online (VFI) devices with double conversion technology in line with the UPS classification according to IEC 62040-3. Capacities of up to 3000VA provide the right power supply and technology for all individual requirements.

The use of uninterruptible power supplies can particularly benefit your company from a financial viewpoint: Having to search for and restore lost or damaged data after a power failure can cost a great deal of time and money. In such incidents UPS helps to protect your data.
