Smart Power Distribution

Each of the 10 USB-C ports provides up to 60W, with a total output of 350W that dynamically adjusts in real time to meet varying device needs. Its smart power allocation technology prioritizes active ports requiring higher output while reducing power to idle ports, and supports PPS (3.3-21V 3.0A) for safe, rapid USB-C charging.

Flexible Mounting & Scalable Design

Designed for flexibility, the hub includes rack-mounting ears for 19-inch server racks as well as rubber-gripped feet for secure desktop use. Its stackable design allows multiple units to be layered neatly, expanding charging capacity without adding clutter.

Active Cooling & Safety Compliance

A built-in fan ensures active cooling during continuous, high-load operation, while charging status LEDs on each port provide at a glance visual charging status. The charging hub is TUV SUD certified and compliant with USB-IF, FCC, and CE standards, and includes overcurrent and short-circuit protection.
