MOES 4GCM-S26-EU-1-S-MS Outdoor Camera with Solar Panel, 7800mAh, 4G

Keep your home and property safe with the MOES 4GCM-S26-EU-1-S-MS outdoor camera. The device offers 3 MP (1296P) resolution, providing clear, detailed images both day and night. The built-in 4G module allows you to use the camera without Wi-Fi access, while the integrated solar panel and 7800 mAh battery provide convenient power. Additional features include intelligent human detection, instant event notifications, two-way voice communication, and a light and sound alarm function. Furthermore, its IP65 rating allows the device to be used in various weather conditions.

Detailed Images Day and Night

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The MOES camera records video at 3 MP (1296P) resolution, allowing you to closely monitor your surroundings and spot important details. Additionally, the color night vision feature provides a clear image even after dark. This allows you to check what’s happening in front of your house, in your driveway, or in your yard—regardless of the time of day.

4G Connectivity—Monitoring Without Wi-Fi

Don’t have access to a Wi-Fi network where you want to install the camera? No problem! The MOES model is equipped with a built-in 4G module that enables data transmission over a cellular network. This makes the device ideal not only for use around the house but also in areas without Wi-Fi coverage, such as on a plot of land or on a farm. You can conveniently use the remote monitoring feature without having to connect the camera to a local wireless network.

Solar Power for Greater Independence

No more frequent charging! The camera is equipped with a solar panel that allows it to use solar energy to power the device. The built-in 7800 mAh battery stores the energy needed for operation, allowing the camera to function even when access to sunlight is limited. This solution allows you to conveniently monitor a selected area without the need for a permanent wired power connection.

Smart Human Detection

Gain greater control over what’s happening on your property. The MOES camera supports motion detection, allowing it to recognize the presence of people in the monitored area. When a person is detected, the device sends a notification to the app, allowing you to quickly learn about the event and check the situation. What’s more, you can specify the area to be monitored for motion. This allows you to focus the detection function on a selected part of the frame, such as the entrance gate, front door, or driveway.

Instant Notifications and Effective Deterrence

The camera not only alerts you when it detects a person but also offers additional features to enhance security. It is equipped with a floodlight and an alarm siren, which can help deter unwanted individuals on your property. Notifications sent to the app allow you to respond quickly to potential

threats, even when you’re away from home. Thanks to the combination of light and sound alarms and remote monitoring, you have greater control over the security of your surroundings.

Two-way voice communication

Want to talk to someone in front of the camera without leaving your home? The two-way voice communication feature lets you both hear sounds from the monitored area and send messages through the mobile app. This way, you can address family members, talk to a guest, or respond to the presence of a stranger. Keep in mind that you can only start a voice conversation from within the app. Integration with Alexa and Google Home allows you to view a video feed, but does not support two-way communication through these platforms.

Live View and Access to Recordings

Check what’s happening on your property, no matter where you are. The camera works with the MOES, Smart Life, and Tuya apps, which allow you to remotely monitor the feed and review recorded events. The device supports event-triggered recording, so you can review footage related to detected motion. A TF memory card is required to save videos. The camera supports 32 GB, 64 GB, and 128 GB cards, allowing you to choose the storage capacity that best suits your needs.

Efficient File Storage with H.265

The MOES camera supports the H.264 and H.265 video compression standards, which reduce the size of video files. With H.265, the requirements for storage space and transmission bandwidth can be up to 50% lower than with H.264. This means more efficient use of available storage and less strain on the connection during video transmission. This is particularly useful for cameras that transmit data over a 4G network.

Adjust the viewing angle to suit your needs

Proper camera positioning allows for more effective monitoring of the selected area. The MOES model offers manual adjustment thanks to a mount that allows for 360° rotation and 90° tilt. The field of view is 92° horizontally and 66° vertically, providing a wide overview of the monitored area. So you can point the lens exactly where you need it—at the building entrance, garden, driveway, or

another important part of the property.

Resistance to Changing Weather Conditions

Rain, dust, or temperature fluctuations don’t have to mean giving up on surveillance. The camera features an IP65 rating, which provides protection against dust and water jets. The device can operate at temperatures ranging from -10°C to 50°C, making it ideal for outdoor use throughout the year. Its durable construction, combined with an integrated solar panel, allows you to conveniently monitor the area around your home and other spaces requiring regular surveillance.

Included

- MOES S26 camera x1
- Mounting bracket x1
- User manual x1
- Set of mounting screws x1
- USB cable x1

Manufacturer	MOES
Model	4GCM-S26-EU-1-S-MS
Resolution	3 MP (1296P)
Image sensor	3 MP
Connectivity	4G
Night Mode	Color night vision
Motion Detection	Yes, with person detection
Detection Area Selection	Yes
Notifications	Yes, via the mobile app
Alarm	Audible siren, strobe light, in-app notifications
Two-way communication	Yes, via the app
Supported apps	MOES, Smart Life, Tuya

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice.
