New series of WF11 wall-mounted RACK cabinets from Lanberg

Lanberg is proud to introduce its new WF11 series of wall-mounted rack installation cabinets, designed for ICT and IT professionals. The new 10" rack installation cabinets feature a sleek design that is perfect for home IT networks, small and medium-sized businesses, as well as server rooms and data centers.

With numerous enhancements, such as 4 vertical mounting rails, the ability to mount a fan without taking up equipment space , or side access, the WF11 series offers functionality and aesthetics at

the highest level. Additional enhancements to the series include M10 holes in the bottom cover for mounting on casters, feet or installing additional accessories. The cabinets are available in 4U, 6U and 9U sizes for optimal customization.

Quick and easy installation of RACK WF11

The WF11 10" RACK wall-mounted cabinets are designed for quick and easy installation, both for laypeople and professional installers. The included rear mounting strip is a significant convenience, allowing for significant flexibility and time savings in wall mounting. Side access via pull-down side doors, the ability to set the front door as either right or left-handed, and the option to remove the rear wall make it easy to install and modify equipment inside the cabinet. Managing your network infrastructure has never been easier.

Excellent ventilation without sacrificing space

WF11 server cabinets provide efficient cooling thanks to an optimized ventilation system. The new, modified design allows the fan to be mounted without taking up space allocated for cabinet equipment, unlike the earlier WF10 series. Ventilation holes in the ceiling and bottom panels mean optimal temperature conditions inside the cabinet, which translates into reliability and longevity of stored equipment.

Robust design and increased stability

An additional two vertical mounting rails at the rear of the cabinet increase the stability of the installed equipment, ensuring the safety and aesthetics of the installation. Thanks to this, the cabinet allows you to store a variety of equipment, such as CCTV surveillance systems, alarm systems or server network components. Lanberg WF11 RACK cabinets are made of high-quality rolled steel, offering solid construction and reliability.

Additional functionality and new dimensions

The WF11 series of server cabinets features cable openings in the top and bottom panels for easy installation of cabling and equipment. An included grounding cable enhances installation security, and a glass front door adds elegance and allows easy inspection of equipment inside the cabinet.

The new convenient 300 x 300 mm size allows for the installation of many popular home and business hardware configurations, as well as the cabinet's ability to fit into small spaces.

Flat Pack - saving space and cost

With flat pack packaging, WF11 cabinets make transportation and storage easy, allowing you to significantly save space and reduce transportation costs. Self-assembly of the cabinets can be done in a short period of time, allowing you to concentrate on network construction and equipment installation. This network construction solution is ideal for companies that value efficiency and convenience.

Compatible Lanberg accessories and components

The features of Lanberg's RACK 10 cabinets also include good compatibility with many other devices. We offer a wide range of rack accessories and components, allowing you to easily expand your installation with more compatible components. This allows you to customize your rack for optimal fit and functionality. All accessories are available at our retail partners' online stores, making the purchasing process easier and speeding up network projects. We offer a range of compatible components and accessories made of high-quality materials, including:

- butt shelf,
- brush panels,
- cable organizers,
- caps,
- cooling accessories: fans, thermostats,
- patch panels, keystone panels,
- PDU strips,
- additional accessories: casters and feet for floor mounting,
- installation support tools.
