FLAPS LEVER

In order to increase the lift coefficient at low speeds, management of your flaps is of the utmost importance in order to avoid the aircraft stalling.

Adjust your flying speed for the best positioning, for safe piloting in all conditions.

PARKING BRAKE FUNCTION

Parking brakes are used by commercial aircraft when ground crew members are unable to position the chocks. During a storm, or when ground crews are not allowed on the airport ramp, the parking brake built into the TCA Quadrant Add-On Airbus Edition makes it easy for you to take care of your stopping and parking maneuvers.

SPEED BRAKE MANAGEMENT

For optimal control of different maneuvers that require a precise amount of lift, including during descent and landing phases, you can use the speed brake lever to enhance your aircraft’s drag control with remarkable precision, in order to decrease your flight speed.

LANDING GEAR LEVER

An aircraft’s landing gear is a classic, legendary and indispensable tool for proper control of post-takeoff procedures, as well as when approaching landings.

This intuitive control helps you save precious time and allows you to focus on other tasks to be carried out in your checklist.

AIRBUS TCA AVIATION ECOSYSTEM

The Airbus TCA (Thrustmaster Civil Aviation) ecosystem offers many optional add-ons, to enhance your immersion in games.

Check out the TCA Sidestick Airbus Edition, TCA Quadrant Airbus Edition, TM Flying Clamp and the famous TFRP rudder system (all sold separately) for breathtaking flying sessions.
