

SILICON POWER XPOWER Pulse 32GB kit of 2 DDR4 3200MHz DIMM CL16 XMP

Model: SP032GXLZU320BDI

Manufacturer: SILICON POWER COMPUTER &
COMMUNICAT

EAN: 4713436160618

Product Code: 301699

R6,845

The Silicon Power XPOWER Pulse memory kit is designed to elevate your computing experience, offering a blend of high-speed performance, large capacity, and advanced technology. With 32 GB of DDR4 SDRAM, divided into two 16 GB modules, users can enjoy enhanced system responsiveness and the ability to run multiple applications simultaneously without lag. The memory kit operates at a speed of 3200 MHz with a CAS latency of CL16, ensuring efficient data processing and improved system performance. Additionally, it features Intel Extreme Memory Profiles (XMP 2.0), allowing for easy overclocking adjustments to meet the specific needs of users. The low supply voltage of 1.35 V not only contributes to the system's energy efficiency but also helps maintain a cooler operating environment, further enhancing the stability and longevity of your system. Whether you're a gamer, creative professional, or tech enthusiast, the Silicon Power XPOWER Pulse memory kit is a suitable choice for upgrading your computer's memory.
