

## HOTWAV Hyper 7S smartphone (yellow)

Model: Hyper 7S Yellow

Manufacturer: HOTWAV

EAN: 6971593179791

Product Code: 303563

## R4,638

### HOTWAV Hyper 7S smartphone (yellow)

The HOTWAV Hyper 7S is a 5G smartphone that challenges the toughest conditions, combining uncompromising durability with advanced technology. At the heart of the device is a powerful 6 nm Unisoc T8200 processor clocked at up to 2.3 GHz, which, together with 16 GB of RAM (4 GB RAM + 12 GB virtual memory) and 256 GB of storage space, ensures high system performance and smooth multitasking even under heavy load.

### Durability confirmed by certificates

The design meets the stringent IP68, IP69K, and MIL-STD-810H standards, guaranteeing uncompromising safety in all conditions. The device is completely dustproof and ready for extreme challenges - from immersion in water to a depth of 2 meters for at least 30 minutes to exposure to high temperatures and high-pressure jets. Additional drop resistance tests from a height of 1.2 meters confirm that the smartphone remains fully functional even after unexpected incidents during

intense field trips.

## **Futuristic design and reinforced construction**

The Hyper 7S's appearance pays homage to modern robotics – the distinctive high-gloss rear panel, created using an advanced electroplating process, gives it a unique, mech-inspired character.

Aggressive, geometric lines and metallic accents create a cohesive whole with the device's "robotic armor." Its durability is confirmed by details such as a screw-mounted aluminum frame, shock-absorbing rubber corners, and a sealed charging port cover. A practical addition is the integrated lanyard hook, which makes it easy to carry the phone safely in difficult terrain.

## **Professional lighting for every trail**

Integrated into the rear panel, the LED lamp, with 510 6W diodes, generates a powerful beam of light with a brightness of 280 lumens, which effectively illuminates the darkness at long distances. Powered by a rechargeable battery, the lamp offers unparalleled operating time and versatility: from three levels of constant light intensity, through emergency modes (SOS and Super flash), to a practical timer that allows you to program the lighting time (up to 60 minutes). The whole thing is fully waterproof, making it a reliable source of light in all weather conditions.

## **Notifications in a new dimension**

The three-color RGB backlight is more than just a decoration – it is an interactive notification center hidden in the casing. The system dynamically responds to incoming calls, messages, and the rhythm of the music being played, creating an impressive fusion of functionality and modern style. With this solution, you always know what's happening with your phone without having to check the screen, which is extremely practical during work or meetings.

## **Unmatched power and smooth image**

The 10,800 mAh battery provides an amazing standby time of over 62 days. With such a huge cell with 20W fast charging, the user can make continuous calls for almost 2 days or enjoy music for over 4 days without interruption. Although it takes about 5 hours to fully charge the battery, the stored energy allows for extremely long independence in the field.

## **Connectivity, navigation, and additional features**

The smartphone supports 5G and Wi-Fi 6 networks, providing fast Internet access, while Bluetooth 5.1 technology ensures a stable connection with the user's accessories. The device offers a full suite of modern features: from NFC contactless payments and a fast fingerprint reader to secure Face ID facial recognition. The whole thing runs on the latest Android 15 system with Google Gemini AI support, providing unprecedented comfort and intelligent personalization of use.

## **Cameras and screen for everyday tasks**

The 21 MP main rear camera and 8 MP front camera allow you to take photos and make video calls in a variety of conditions. The 6.6-inch HD+ (720 × 1612) INCELL screen, protected by Corning Glass, ensures good readability, while the 120 Hz refresh rate and 500 nits brightness guarantee a smooth and clear image even on sunny days.

## **Dual-band L1+L5 navigation**

Thanks to the advanced dual-band L1 + L5 system, the Hyper 7S provides professional location accuracy. The device supports four satellite systems simultaneously: GPS, BEIDOU, GLONASS, and Galileo, which guarantees instant route calculation. The use of two frequency bands increases resistance to interference in difficult terrain - in dense forests, deep valleys, or among urban buildings. It is a reliable solution for anyone who needs stable navigation where standard smartphones lose signal.

## **Included in the box**

- Smartphone
- 20 W mains charger
- USB-C cable
- OTG cable
- Colored protective film
- User manual
- Warranty card
