HOTWAV Cyber 13 smartphone (orange)

The HOTWAV Cyber 13 is a smartphone designed for intensive use in demanding conditions, combining robust construction with high functionality. It offers a powerful Unisoc T606 octa-core processor, a large 6.6" HD+ display, a capacious 10800 mAh battery, and a wide range of multimedia and communication features. The whole thing runs on Android 14 and meets IP68, IP69K, and MIL-STD 810H resistance standards.

Operating memory and data storage

The smartphone is equipped with 8 GB of RAM, which can be virtually expanded up to 16 GB, which translates into smooth multitasking and stable application performance. Users have 128 GB of internal memory at their disposal, providing plenty of space for photos, videos, and applications. If necessary, the space can be easily expanded up to 1 TB with a TF card, allowing you to tailor the capacity to your individual needs.

Performance that keeps pace with your tasks

At the heart of the device is a powerful Unisoc T606 octa-core processor, which, combined with LPDDR4X RAM and fast UFS 2.2 internal memory, guarantees high performance. This configuration ensures smooth multitasking, lightning-fast application launch, and full stability of the Android 14 system.

A smartphone for special tasks in extreme conditions

The HOTWAV Cyber 13 is designed to work where standard smartphones fail. The IP68 certification guarantees water resistance up to 1.5 m for 30 minutes, and IP69K confirms resistance to high-pressure water and elevated temperatures. The MIL-STD 810H standard means resistance to drops from heights of up to 1.2 m, and the sealed design effectively protects against dust. The screen is protected by Panda Glass, which is highly transparent and offers increased resistance to scratches and impacts.

See more, capture better with the HD+ screen

The HOTWAV Cyber 13 is equipped with a spacious 6.6" HD+ display, ensuring excellent image clarity in all lighting conditions. The 64 MP main camera captures detailed photos, while the 16 MP front camera ensures high-quality video calls and selfies. The versatility of the device is emphasized by a set of cameras with panorama mode, allowing you to capture high-quality memories both in the field and during everyday use.

Creativity without limits

The smartphone offers a set of smart modes that automatically adjust the settings to the environment. Night mode brings out details in low light, portrait mode provides a natural background blur (bokeh), and panorama mode allows you to capture expansive landscapes. Creativity is supported by time-lapse functions for impressive time-lapse videos and HDR, which ensures a balance of light and shadow. For the most demanding users, there is Pro Mode, which offers full control over exposure, which, combined with a 64 MP sensor, guarantees great results in any situation.

Professional lighting system for special tasks

One of the key advantages of the HOTWAV Cyber 13 is its integrated flashlight with an impressive 150 lumens. Thanks to advanced optics, the device generates a focused beam of light with a range of up to 25 meters, which far exceeds the capabilities of standard LEDs used in smartphones. This feature was designed with reliability in extreme conditions and outdoor activities in mind. A strong light source is invaluable in many scenarios: from night trips and camping, through specialized service work, to emergency situations. An additional advantage is the fully sealed housing, which allows the flashlight to be used as effective underwater lighting.

Reliable power all day long

The Cyber 13 is equipped with an impressive 10800 mAh battery that sets new standards for operating time. With varied use, the device can operate for many days on a single charge, making it a reliable partner during long trips, intensive field work, or in emergency situations. What's more, thanks to the OTG Reverse Charging function, the smartphone can act as a mobile power bank, allowing you to emergency power other devices directly from your battery.

Global communication and precise satellite navigation

The HOTWAV Cyber 13 guarantees constant contact with the world thanks to its support for the global 4G LTE network and Bluetooth 5.1 technology. The smartphone is also equipped with a multifunctional NFC module, which enables convenient contactless payments. Travelers will appreciate the advanced navigation system – support for GPS, Beidou, GLONASS, and Galileo standards ensures fast and accurate location determination even in difficult terrain conditions.

Integrated security systems

Data is protected by modern biometric systems that guarantee fast access to the device only to authorized users. Security is ensured by a fingerprint reader located on the side of the case and a Face ID function based on facial recognition technology.

Flexibility in everyday use

The device adapts to the user's needs thanks to the use of a hybrid card connector. The Dual SIM system allows you to use two phone numbers (2x Nano SIM) simultaneously or install one SIM card and a TF memory card with a capacity of up to 1 TB. This solution makes it easier to separate private and professional matters and provides ample space for file storage.

Included in the box

- Smartphone
- 5V 2A mains charger
- USB-C cable
- User manual
- Warranty card
- SIM card tray needle
- Protective film

Manufacturer HOTWAV

Model Cyber 13 Orange

Processor Unisoc T606, octa-core

RAM 8 GB + up to 8 GB of virtual memory

Internal memory 128 GB

Memory card support Up to 1 TB (TF)
