R2,000

Music is all around us - in the park, on a picnic or just in your living room - from our smartphones or tablets. But often there's just no bass. Transfer your favourite summer mix by Bluetooth to the portable speaker and enjoy powerful 360° sound everywhere you go!

Full-throated: the Pipe 3.0 Bluetooth loudspeaker

How often do you experience this unforgettable situation whenever you hear a very specific song? Whether landmark birthday or garden party with your favourite people: no matter where we gather experiences, music plays an important role. Now, with the new "Pipe 3.0", you always have good sound when you need it, spontaneously on the go or for a precisely planned marriage proposal on a beach holiday. That's why our portable Bluetooth loudspeaker is even more dynamic, even handier and even better. This third version is our answer to the previous "Hype of the Pipe" - and it takes things even further!

Rich power, outstanding sound

With an impressive 24 Watts of stereo music power, this little sound grenade never weakens, not even in full-on party mood. That makes the "Pipe 3.0" Bluetooth loudspeaker the perfect music box for every occasion and every kind of musical enjoyment. You can now switch in a flash from a classical organ concert while relaxing in your favourite wing chair to fun and games with the children in the holidays, and so rescue a rainy afternoon.

Sound: check, light: check - and action!

A dance floor needs proper lighting – but that's possible not only on a big scale, but now happily also on a small scale and in a portable format. Ultimately, light and music together determine the special features of every setting. That's why we've given the "Pipe 3.0" Bluetooth loudspeaker adjustable LED lighting. The mood lighting gives the little music companion a very special atmosphere and underscores each setting perfectly, from romance to garage party. The RGB-LED lighting can be selected from ten different modes to match the music and the mood, or simply for use as a discreet light source. With different colours and dynamic colour sequences, the lighting provides the perfect harmony of sound and light with and without colour change.
