BE THE FIRST ON THE FINISH LINE WITH SEABORG 400

The screech of tires, engine roar, and heated asphalt - the only thing missing for a full experience is a real steering wheel. Seaborg 400 is a redefined control system for your virtual vehicle. The combination of a dual vibration system, high-quality materials, customizable rotation range, and unique design guarantees your victory!

FEEL EVERY BUMP IN THE ROAD

Immerse yourself in the world of racing! Thanks to the dual vibration system, you will feel every bump in the road, catch the shoulder, and the loss of vehicle traction. The Seaborg 400 steering wheel will be a great companion for carefree fun on gravel, thrilling quarter-mile races, and phenomenal drifts. Feel the difference!

UNPARALLELED CUSTOMIZATION

For a full range of sensations accompanying driving in tight corners, you can set the rotation range of the steering wheel from 270 to 900 degrees. Do you dream of being the king of gymkhana? With Seaborg 400, everything is possible!

MAKE IT YOUR OWN

The steering wheel is equipped with 15 buttons (including 8 programmable ones), giving you complete freedom to personalize the virtual cockpit. Nitro, slow motion, handbrake - all these options can be available during gameplay directly from the steering wheel!

FULL THROTTLE!

Exciting races require equipment with exceptional durability. Switching between braking and accelerating on every sharp turn is a significant challenge for the pedal set of the steering wheel. Seaborg 400 is a synonym for durability. Metal elements and solid material are just waiting for the green light!

UNMATCHED COMFORT

Can you imagine not having a radio in your car? For travel convenience and entertainment comfort, we placed a 3.5mm audio jack output at the steering wheel, so you don't have to worry about running out of headphone cable. The rubber, non-slip surface that facilitates grip also affects the comfort of using the controller. A long, two-meter cable will allow you to create a racing station at the right distance from the display.

MULTI-PLATFORM GAMEPLAY

The Seaborg 400 steering wheel is compatible with Xbox 360 (in this case, you also need to have an original wired controller), Xbox One, Nintendo Switch, PlayStation 3, and PlayStation 4, allowing you to switch platforms as you please! It works in both X-Input and D-Input modes. You can also play with it on a computer running Windows XP, Vista, 7, 8, 10, and 11

MOUNT IT HOW YOU WANT!

We equipped the steering wheel with sturdy clamping grips for stable attachment. For people who cannot mount the device in this way, the housing is equipped with special suction cups that prevent the steering wheel from slipping on the surface of the table. Mounting is easy, so you can quickly hit the road with Seaborg 400.
