HiFiMAN RE2000 Pro Gold In-Ear Headphones

HiFiMAN RE2000 Pro Gold are flagship in-ear headphones that combine advanced acoustic technology with luxurious performance. Featuring a gold brass casing and an innovative Topology Driver, the RE2000 Pro delivers exceptional sound quality and superior comfort. This is for discerning audiophiles who value both perfect sound and aesthetics.

Revolutionary Topology Driver

At the heart of the RE2000 Pro is the Topology Driver, whose diaphragm is coated with a nanoparticle coating. The unique geometric pattern on the surface of the diaphragm allows precise control of sound waves, minimizing distortion and resonances. With this technology, the headphones offer a natural, detailed sound that impresses in every range - from deep bass to crystalline highs.

Gold casing - aesthetics and acoustics

The RE2000 Pro's housing is made of brass plated with 24K gold. This choice of material not only gives the headphones an exclusive look, but also optimizes their acoustic properties. Brass, thanks to its rigidity and ability to dampen vibrations, ensures sound clarity and reduces unwanted resonances. The ergonomic shape of the cabinet guarantees comfort, even during hours of listening.

Improved design and enhanced soundstage

The RE2000 Pro's design has been optimized to provide an even better acoustic experience compared to previous models. The precise positioning of the drivers and their integration into the cabinet allow for a wide soundstage and realistic reproduction of space. This makes the RE2000 Pro an ideal choice for analytical listening and enjoying music at the highest level.

Interchangeable cables - personalization and durability

The headphones feature "H" connectors that allow quick and easy cable replacement. This allows users to customize the headphones to their own preferences by choosing different types of cables - from oxygen-free copper to silver cables. This solution provides flexibility and guarantees the longevity of the product.

Customization to suit the user's needs

The RE2000 Pro comes with a wide range of silicone and foam tips, allowing for a perfect fit for any ear. A good seal ensures sound isolation and optimal sound quality, allowing you to enjoy your music in any environment - from a quiet home to a noisy environment.

Specifications for the most demanding

The headphones offer a frequency response of 5 Hz to 20 kHz, an impedance of 60 Ω and a sensitivity of 103 dB. These parameters allow them to work with both portable devices and advanced audio systems. The lightweight design, weighing just 13.8 grams, makes the headphones comfortable for everyday use.

Innovation of dynamic transducers

HiFiMAN RE2000 Pro use dynamic transducers, which eliminate the typical drawbacks of armature designs. Unlike standard dynamic drivers, the Topology Driver model reduces unwanted diaphragm vibrations, offering exceptional control over sound reproduction. It's a guarantee of sound with clarity that stands out in its class.

Luxury craftsmanship and technology for audiophiles

The RE2000 Pro doesn't just deliver outstanding sound, but also top-notch manufacturing aesthetics. The gold finish and attention to detail make these headphones as visually impressive as they are functionally. Created for users who do not recognize compromise in any aspect.

Included

- A pair of RE2000
- Pair of foam tips (large)
- Pair of foam tips (medium)
- Pair of Tri-flange tips (large)
- Pair of Tri-flange tips (medium)
- Pair of Bi-flange tips (medium)
- Pair of Single-Flange tips (medium)
- Two-pin "H" connectors *2
- Cable
- Pair of ear guides
- Travel case for headphones
- User manual
