

Darkflash DV360S CPU water cooler (black)

Model: DV360S

Manufacturer: DARKFLASH

EAN: 4711527000980

Product Code: 515571

R3,067

Darkflash DV360S CPU water cooler (black)

The Darkflash DV360S is an extremely powerful water cooler for Intel and AMD processors that combines advanced technology with a modernistic design. Equipped with a 360-millimeter heatsink and three low-noise PWM fans, it efficiently dissipates heat, ensuring stability even during intense gameplay. Its ARGB backlighting with 5V sync and IPS LCD screen allow you to fully personalize the visual effects. The copper water block and pump with ceramic bearings guarantee high cooling efficiency and long life. Flexible FEP cables simplify installation, and the aluminum heatsink supports overclocking. In addition, the PWM hub allows precise fan control, and the anti-vibration system reduces noise. The Darkflash DV360S is the ideal solution for demanding gamers who want top performance and stylish design from their device.

Perfect cooling for your hardware

Darkflash DV360S is an advanced water cooling system that combines excellent build quality with impressive performance. With a 360-millimeter heatsink and three 120-millimeter PWM fans, it ensures accurate heat dissipation and optimizes CPU temperatures even during intense gaming sessions and demanding calculations. Low-noise fans guarantee quiet and stable system operation, eliminating the problem of hardware overheating. This is hardware that will meet the expectations of any gamer.

Wide compatibility and safe use

Whether you use Intel or AMD processors, the Darkflash DV360S offers full support for a wide range of sockets. Compatibility includes LGA2011, LGA2066, LGA1700, as well as AM4+ and AM5 sockets, among others, making this kit a universal solution for many configurations. An added bonus is easy installation thanks to the included clips, which require no additional tools. The DV360S uses hoses made of FEP material, which provides exceptional resistance to abrasion and high temperatures. Thanks to the flexibility of the hoses, installing the system in the computer case is extremely easy, and the leak-proof design guarantees safe use without the risk of leaks.

Tailored to your preferences

With ARGB 5V support, Darkflash DV360S offers spectacular lighting effects that can be synchronized with your ASUS, MSI, GIGABYTE or ASROCK motherboard. The use of Addressable RGB technology allows you to choose from 16.8 million colors, giving you almost unlimited personalization possibilities. What's more, the cooler is equipped with a 3.2-inch IPS LCD display with a resolution of 320 x 320 pixels, which allows you to display system parameters, dynamic themes or custom graphics (in JPG, PNG, GIF formats), which gives the whole set a unique style.

"Infinity Mirror" and magnetic screen mounting

The striking RGB backlighting doesn't end with the fans - the use of the "Infinity Mirror" effect creates a mesmerizing lighting effect that gives the case a futuristic look. In addition, the LCD screen can be rotated 270°, which allows you to perfectly adjust the displayed information to individual user preferences. Your equipment will take on a whole new character!

Advanced pump design and equipment control

At the heart of the Darkflash DV360S is a copper water block with high thermal conductivity, which effectively dissipates heat from the CPU, enabling stable performance and high overclocking (overclocking) values. Special surface treatment minimizes thermal resistance and increases cooling efficiency. The pump itself is equipped with ceramic bearings and a double structure resistant to corrosion and high temperatures, which significantly extends its life. In addition, the kit is equipped with a three-port PWM hub, which allows simultaneous connection and management of fans. Support for both 3-pin and 4-pin connectors ensures wide compatibility with various motherboards and cooling systems. The Darkflash DV360S is not only cooling, but also a striking tuning element for your PC.

High-performance fans and a powerful heatsink

Darkflash DV360S is equipped with three 120-millimeter PWM fans that automatically adjust their speed according to the CPU temperature, oscillating between 800-1800 RPM. The design of the fans includes aerodynamic blades, which ensure strong airflow with minimal noise. In addition, the Rifle Bearing used features quiet operation and high durability. Each fan also has eight anti-vibration rubber pads each to eliminate noise and vibration during operation. The DV360S also features a 360-millimeter heatsink made of high-quality aluminum. The densely spaced fins efficiently dissipate heat, making the cooling ideal for those planning to overclock (overclock) the CPU. The standard mount for 120mm fans allows for easy removal and replacement when needed.

Included

- fan (ARGB PWM 120 mm) x3
- mounting screws for the fan x12
- heatsink mounting screws x12
- USB-C to USB 2.0 cable
- PWM hub
- fiber board
- user manual

Manufacturer	Darkflash
Model	DV360S
Screen resolution	320 x 320 pixels
Dimensions of the water block	73.1 x 73.1 x 72.4 mm
Dimensions of heatsink	395 x 120 x 27 mm
Pump length	440 mm
Blocking speed	2700 ± 10% RPM
Rated voltage	12V
Initial voltage	≥6V
Current	0.6A
Power consumption	7.2W
Color	Black

Fans

Dimensions	120 x 120 x 25 mm
Rated voltage	12V
Initial voltage	≥6V
Speed	800~1800 ± 10% RPM
Current	0.65A
Airflow	64.05CFM ± 10%
Air pressure	1.85 ± 10% mm H2O
Noise level	30dBA
Bearing type	Hydrostatic

Sockets

Intel GA2011, 2011-V3, 2066, 1366, 115X, 1700

AMD FM1, FM2, FM2+, AM2, AM2+, AM3, AM3+, AM4+, AM5
