HDMI® Recorder| USB 3.0 | USB Video Class | USB-A Cable Included

This HDMI® to USB-C™ video capture device lets you record HDMI video to your USB-C, USB-A or Thunderbolt™ 3 computer.

Easy Setup, Easy Capture

For hassle-free recording, you can install the HDMI capture device by simply connecting it to your computer. The capture device features USB Video Class (UVC), a video capture standard that's natively supported by Mac, Windows® and Linux®. Unlike other capture devices that require proprietary driver installation, UVC based capture devices install automatically for a truly plug-and-play solution. Also, with this recorder you're not limited to the included software; you can use any third-party software that uses UVC compatible frameworks such as Quicktime or DirectShow®.

Capture HD Video

Record 1080p video at 60fps (frames per second) from your Windows PC, gaming console, camera (and more) so you can save, share or edit your content. Capture meetings, presentations, conference calls and security footage directly to your computer.

Stream Your 1080p Content

Stream video over the web using Twitch™ or other third-party streaming platforms. With the included software or third-party UVC compatible software like Open Broadcaster Software (OBS), you can live broadcast video over the internet using third-party video streaming platforms.
