This panel mount USB-A to USB-A extension cable lets you reposition a USB 5Gbps (USB 3.0/3.2 Gen 1) port for easier access and cleaner system layouts. With a flexible TPE jacket and a screw-mounted female connector, it is designed for secure installation in panels, enclosures, and workstations.

Designed for Fixed Installations

The USB-A female panel-mount connector includes integrated mounting flanges with screws to keep the port firmly in place in vibration-prone or high-use environments. This provides a consistent and accessible connection point for peripherals without requiring access to the back of a system.

Reduce Port Wear and Simplify Access

By relocating frequently used USB ports to a fixed panel, the Panel Mount USB Cable helps reduce repeated strain on host ports. This makes it well suited for public-facing systems such as kiosks or shared workstations, as well as meeting rooms where controlled USB access is required.
