Equipment installed in rack cabinets, such as servers, systems of emergency power supply, surveillance, CCTV and alarm, all require maintaining the temperature at an appropriate, steady level. Lanberg offers a simple and flexible solution that will easily accomplish this very goal: closed-loop thermostat AK-1505-S.

It enables temperature regulation inside of server rack cabinets by controlling the power supply to cooling equipment and/or products providing more efficient airflow. The device is equipped with a current contact, which is shorted (closed) and thus switches on the connected cooling only when the temperature, set previously by the user, is exceeded.

All this is possible due to the thermo-bimetallic sensor, which mechanically deforms under the
