EMEET SmartCam S600L Webcam

The EMEET SmartCam S600L is a webcam featuring UHD 4K resolution, fast 0.2-second autofocus, and a built-in ring light with adjustable brightness. Thanks to its large 1/2" sensor and support for 1080p at 60 fps, it delivers smooth, clear video for both online meetings and content creation.

Clear Image

The camera is equipped with a large 1/2" sensor that captures more light than standard solutions, resulting in a brighter and more natural image, especially in low-light conditions. UHD 4K resolution captures more detail, while 1080p at 60 fps ensures smooth footage, which is crucial for streaming and dynamic shots.

Built-in lighting and image customization

The integrated ring light with color temperature adjustment ranging from 2600K to 6200K allows you to adapt the lighting to the room conditions. Additional color modes let you change the character of your footage, making it easier to match the visual effect to the environment in which you're recording. A high CRI of ≥ 90 ensures colors look natural, resulting in a more professional look without the need for external lights.

Fast autofocus and precise framing

Autofocus operates in approximately 0.2 seconds, allowing the camera to quickly adjust focus, even when changing positions or working up close. The 73° field of view is designed to focus on the user while maintaining a natural frame without unnecessary background elements. This makes it easier to conduct meetings, presentations, or recordings.

Better audio quality and additional features

Two built-in microphones capture clear audio, improving communication during calls and broadcasts. The green screen feature allows you to separate your figure from the surroundings and replace the background with another image, which is useful for streaming and creative work. Additionally, desktop mode allows you to point the camera at your desk, making it easier to present documents or products.

Simple operation and wide compatibility

The camera operates in plug-and-play mode, so it's ready to use immediately after connecting. The included USB cable and USB-C/USB-A adapter allow you to use it on various devices without additional accessories. It supports Windows and macOS and works with popular platforms such as Zoom, Microsoft Teams, and Google Meet, as well as streaming services like YouTube, Twitch, and OBS.

Thoughtful solutions for everyday use

The S600L model is equipped with a physical privacy cover that allows you to quickly cover the lens when the camera is not in use. The ability to mount it on a tripod and rotate the camera makes it easy to create content even in a mobile format. The package is complemented by EMEET STUDIO
