paramount.

The 12 Keystone-compatible slots allow individual configuration with different modules – from Cat.6A network sockets to HDMI and USB inserts. This means that the panel can be adapted precisely to the respective requirements, which is particularly advantageous in floor distributors, ancillary rooms, or even in industrial environments.

The sturdy metal design made of 1.4 mm thick SPCC steel is finished with a high-quality black powder coating (RAL9005) and offers a professional look as well as protection and durability. The scope of delivery includes mounting materials such as M6 cage nuts, screws, and washers for direct mounting in the rack. Two cable ties are also included to neatly route the connected cables.

Whether as a central distribution point for network signals or as an interface for individual multimedia installations, the InLine® 10" blank panel is the ideal choice for system integrators, electrical installers, and network professionals.

Material thickness: 1.4 mm

Color: Black (RAL9005)
