The genuine Canon ink formula lets you achieve incredibly bright and accurate colours that make photographs truly memorable. Skin tones look very natural while bright colours are vivid yet realistic. The pigment black ink used for printing documents produces crisp, clear prints of small letters and sharp lines.

Long lasting photos.

Original Canon inks and photo papers are made for each other. As a result you can produce superb quality prints at home that are resistant to fading long after printing. Printing with our photo printers using genuine ChromLife100, ChromaLife100+ or LUCIA inks on Canon photo papers protects your images for a lifetime.

Protect your printer.

Canon's unique FINE print head technology used in every PIXMA printer delivers outstanding image quality and high-speed document printing. With ink nozzles opening diameters as small as small as 0.009mm it is important to use inks formulated specifically to work with the precise FINE print heads. Genuine inks maintain print quality and prolong life of your printer.

Print more for less.

The PIXMA XL and XXL inks provide significantly more prints than their standard equivalents ensuring longer periods between ink replacements – ideal if you print a lot. The genuine Canon XL inks offer you savings on cost per page which means you can print more for less without compromising on quality.
