Neewer TP75 Adjustable Tripod with Fluid Head

The Neewer TP75 is a professional video tripod with a fluid head, designed to deliver smooth and stable shots when used with DSLR cameras, camcorders, and film rigs weighing up to 10 kg. The aluminum construction ensures high rigidity and durability for heavy-duty use, while the adjustable working height from 89 to 189 cm allows you to comfortably adapt the setup to various shooting scenarios. The fluid head offers 360° rotation and a tilt range from -75° to +90°, making it easy to capture dynamic panoramas and smooth transitions between shots.

Adjustable damping for smooth shots

The fluid head is equipped with separate damping adjustment systems for horizontal and vertical movement. This allows you to adjust the resistance to the weight of the mounted equipment and

your shooting style, resulting in more natural and stable camera movement. Smooth panning and controlled tilting help avoid sudden jerks and vibrations visible in recordings. Additional convenience is provided by a detachable control handle and a built-in spirit level, which helps maintain a straight horizon even when working in more challenging terrain.

Quick switching between tripod and gimbal

The TP75 model is equipped with a dual quick-mount system. This allows you to efficiently switch between filming on a tripod and working with a gimbal without having to reconfigure the entire setup each time. The quick-lock mechanism enables mounting the plate from above and securing it in a very short time, which streamlines work during dynamic shoots. The side release mechanism, on the other hand, allows you to quickly detach the camera and move on to the next shot without unnecessary downtime.

Stable construction and convenient height adjustment

Three-section telescopic legs with a quick-release clamp system allow for convenient adjustment of the working height from 89 cm to 189 cm. When folded, the tripod reaches a transport length of 93 cm, which is due to the design of the head and the leg configuration. Aluminum double tubes increase stability when working with heavier equipment, and the central spreader helps maintain proper leg spacing. Non-slip feet improve traction on various surfaces, making the tripod suitable for both studio and outdoor use.

Versatile tripod for professional use

With a load capacity of up to 10 kg, it supports extensive film setups including cameras, camcorders, telephoto lenses, monitor screens, and other accessories. An additional 1/4" thread allows for mounting compatible devices such as LED lights, magic arms, or viewfinders. The adjustable head with a 75 mm base makes it easy to level the equipment on uneven ground, which increases comfort during field recordings. The Neewer TP75 is a great choice for content creators, videographers, and those producing advertising, documentary, and film content.
