Compact High-Speed DDR4 Memory for Laptops and Small Form Factor Systems

The Origin Storage 16GB DDR4 3200MHz SODIMM 1Rx8 Non-ECC memory module is designed to deliver reliable, high-speed performance for laptops, mini PCs and small form factor systems. Operating at 3200MHz, this module enhances system responsiveness, enabling smoother multitasking and improved performance across business and professional applications.

Engineered for compatibility and efficiency, this SODIMM module is ideal for upgrading modern laptops and compact enterprise systems. Designed with UK IT procurement teams and system integrators in mind, it offers a cost-effective and scalable memory solution for mobile workforces and

space-constrained deployments.

Key Features

16GB DDR4 Memory Capacity

Provides sufficient memory for multitasking, business applications and professional workloads in laptop and compact systems.

3200MHz High-Speed Performance

Ensures faster data transfer and improved system responsiveness for enhanced user productivity.

SODIMM Form Factor

Compact memory design specifically for laptops, mini PCs and small form factor systems.

1Rx8 Single Rank Configuration

Efficient memory architecture suitable for systems requiring stable, consistent performance.

Non-ECC Design

Ideal for commercial and business environments where error correction is not required, offering a cost-effective upgrade option.

Low Power Consumption (1.2V)

Energy-efficient operation supports longer battery life in laptops and reduced power usage in compact systems.

Wide Compatibility

Designed for seamless integration with a broad range of laptops and small form factor devices supporting DDR4 SODIMM memory.
