MC-3GF GAMING CASE

The MC-3GF is a premium gaming tower that blends aesthetics and functionality, featuring a seamless triple tempered glass design that offers an immersive 3D panoramic view of your setup. Available in three exclusive finishes, with advanced cooling, two pre-installed ARGB rear fans, and a vertical GPU mounting system, this case is designed for enthusiasts and professionals seeking ultimate customization and top-tier performance. Its taller chassis ensures superior cooling, while compatibility with reverse-connector motherboards provides seamless integration with the latest technologies.

Premium Triple Glass Design

The MC-3GF is a gaming tower that enhances both aesthetics and functionality. Its frameless triple tempered glass panels on the front, side, and top deliver an incredible 3D panoramic view, showcasing every component with stunning elegance and sophistication.

Available in three versions

Black and White with Triple Tempered Glass or Carbon Fiber PRO Finish with Triple Chromed Glass

Exclusive Finishes

Designed to fit any style, the MC-3GF is available in three premium editions. The black and white versions with triple tempered glass offer a sleek and minimalist look, while the PRO edition stands out with a carbon fiber finish and triple chromed glass. In the PRO version, the glass panels illuminate when turned on, revealing the interior, and transform into elegant mirrors when off, delivering a high-end, sporty aesthetic.

Advanced ARGB Cooling

For optimal thermal performance, the MC-3GF features two pre-installed 120mm ARGB rear fans connected to a control hub with an RF remote, allowing full lighting customization. Its optimized airflow design supports liquid cooling systems up to 360mm, ensuring stable temperatures even in high-performance builds.

Vertical GPU Mounting System

The MC-3GF includes a reinforced steel structure for vertical GPU installation, eliminating the need for additional adapters. This innovative system converts PCI slots into vertical positions via a specialized bracket and integrates a bottom support to evenly distribute the GPU's weight, ensuring maximum stability. Additionally, it creates extra space between the GPU and the side glass, improving airflow and cooling performance. To complete the setup, purchase a GPU Riser Cable (not included) for a professional and efficient installation.

Back Connect Motherboard Compatibility

Designed for a cleaner and more organized setup, the MC-3GF is fully compatible with reverse-connector motherboards, which relocate all connectors to the back of the board. This innovative approach enables more efficient cable management, enhancing both aesthetics and airflow.

Full ARGB Compatibility

The MC-3GF's ARGB lighting system is fully compatible with ARGB motherboards and controllers, including those with reverse connectors. Sync lighting effects across all components and create a fully personalized gaming setup with dynamic visuals and a professional aesthetic.

Expanded Capacity & Versatility

Compatible with ATX, MicroATX, and Mini-ITX motherboards, it offers optimized internal capacity. It supports graphics cards up to 383mm, CPU coolers up to 155mm, and multiple storage options with 3x 2.5" SSDs and 1x 3.5" HDD. Additionally, its advanced cable management system ensures a clean and organized build, maximizing airflow efficiency and simplifying setup maintenance. For fast and seamless connectivity, the MC-3GF features a comprehensive panel with USB-C, USB 3.0, USB 2.0, HD Audio, and a microphone port, ensuring accessibility and versatility in any configuration.
