

HYPERSHELL X Pro S Exoskeleton

Model: XPROS

Manufacturer: HYPERSHELL

EAN: 6977518000331

Product Code: 804131

R23,549

HYPERSHELL X Pro S Exoskeleton

The HYPERSHELL X Pro S is a state-of-the-art exoskeleton designed to assist with movement, specifically for active individuals, trekking enthusiasts, and users who cover long distances on foot. The device uses two motors with a combined power of up to 800 W and a maximum torque of 18 N·m, allowing it to reduce the user's load by up to 30 kg. The intelligent HyperIntuition system analyzes movement in real time and adjusts the level of assistance to the user's gait, providing natural support without any noticeable delays. The 72 Wh battery allows for a range of up to 17.5 km in Eco mode, and the maximum assisted speed is 20 km/h. The lightweight design weighs just 1.8 kg net, while the total weight of the device ready for use, including the battery, is 2.6 kg. When folded, the exoskeleton takes up only 6.5 L of space, making it easy to transport and store.

HyperIntuition Smart System

The greatest advantage of the HYPERHELL X Pro S model is the use of proprietary HyperIntuition technology, which analyzes the user's movement and predicts their next steps. The system operates in real time, responding to changes in pace, direction, and intensity of movement. As a result, assistance is provided exactly when needed, and the user does not feel that the device is operating artificially. This results in more natural movement, reduced muscle fatigue, and greater freedom when navigating challenging terrain.

Effective Load Relief While Walking and Running

Two powerful motors deliver up to 800 W of power, supporting leg movement across varied terrain. The exoskeleton helps reduce the effort required for long walks, uphill climbs, and navigating stairs. The maximum load reduction is equivalent to up to 30 kg of additional weight, which can significantly improve comfort while trekking with a heavy backpack. The device provides active support at speeds of up to 20 km/h, making it ideal for faster walking and running as well.

10 Smart Assistance Modes

The HYPERHELL X Pro S is equipped with ten adaptive operating modes that automatically adjust the type of assistance to your current activity. The system recognizes, among other things, walking, brisk walking, running, stair climbing, ascents, descents, and movement over more challenging terrain. A cyclic motion mode is also available, which supports repetitive leg movements and allows the device's operation to be even better tailored to the user's gait. Thanks to automatic motion analysis, there is no need to constantly adjust settings, which enhances comfort during outdoor use.

Comfortable to wear for many hours

The exoskeleton's design was developed with long-term use in mind. The combination of stainless steel, aluminum alloy, and carbon-fiber-reinforced PA612 plastic ensures high durability while maintaining a low weight. The nylon support elements ensure comfort and a good fit. The extremely lightweight mechanical structure weighs just 1.8 kg, while the total weight of the device when ready for use is only 2.6 kg, ensuring the user does not feel an excessive load even during expeditions lasting many hours.

Long Range and Convenient Charging

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The 72 Wh battery allows you to travel up to 17.5 km in energy-saving Eco mode, providing support for most day-long activities. The manufacturer has included a feature that allows the battery to be charged separately from the device, which increases convenience and reduces the time needed to prepare the equipment for the next trip.

Ready for demanding terrain

The HYPERSHELL X Pro S is designed to operate in a variety of weather conditions. Its IP54 rating protects the device from dust and splashes, so inclement weather doesn't have to mean giving up your activities. The exoskeleton remains fully functional at temperatures ranging from -10°C to 60°C, allowing you to use it both in winter and on summer expeditions. Its stable construction and intelligent controls ensure that the device effectively supports the user on forest paths, rocky trails, and when navigating uneven terrain.

Compact design for easy transport

Despite its advanced technology, the HYPERSHELL X Pro S remains exceptionally portable. When folded, its dimensions are just 430 × 260 × 125 mm, corresponding to a packing volume of 6.5 liters. These compact dimensions make it easy to carry the device in your luggage or stow it in a larger hiking backpack. When unfolded, the exoskeleton measures 430 × 600 × 125 mm, ensuring full functionality and freedom of movement during use.

Included in the set

- HYPERSHELL X Pro S exoskeleton
- 72 Wh battery
- 65 W power adapter
- USB-C cable
- User manual
- Safety instructions

Model	X Pro S
Type	Motion-assist exoskeleton
Number of motors	2
Maximum power output	800 W
Maximum torque	18 N·m
Maximum assist speed	20 km/h
Maximum load relief	up to 30 kg
User energy savings	up to 30%
Assistance technology	HyperIntuition (E2E)
Control system	ESP32-S3
Number of assistance modes	10
Fitness Mode	Dynamic
Hyper Mode	Yes
Boost Mode	No
KERS	Yes
Agentic LM	Yes
Battery capacity	72 Wh
Voltage platform	4S
Range (Eco30)	up to 17.5 km
Hip lever material	stainless steel
Hip lever tube material	aluminum alloy
Leg lever material	PA612 reinforced with carbon fiber
Cover material	nylon
IP rating	IP54
Operating temperature	-10°C to 60°C
Net weight	1.8 kg
Total weight	2.6 kg
Dimensions when folded	430 × 260 × 125 mm
Dimensions when unfolded	430 × 600 × 125 mm
