

RainPoint 2-zone irrigation controller with app

Model: TTV203WRF+TWG004WRF

Manufacturer: RAINPOINT

EAN: 5907085528694

Product Code: 805805

R2,067

RainPoint 2-zone irrigation controller with app

RainPoint is a smart 2-zone irrigation controller that will make caring for your garden easier. With remote control via the app, you can set up to three watering programs for each zone, choose between intensive irrigation and gentle misting modes, and pause watering in case of rain. The rugged IP54 waterproof housing and dirt-removing filter ensure reliability for years to come, while the built-in flow meter and notifications of low charge and possible leaks will help you control water use. Plus, automatic watering based on a soil moisture sensor and local weather forecast saves you time and water. Find out how easy it is to get a lush, green garden!

Remote control

With the included hub (model TWG004WRF), you can expand the system with additional devices and also use it like a regular Wi-Fi outlet. The RainPoint Tuya app, available for iOS and Android, allows you to water manually (turn the water on and off from the app, setting any time you want the valves to run), set schedules (each zone can have as many as three independent daily programs with different start times and watering durations), and manually or automatically pause the schedule during rain.

Two zones, full control

The TTV203WRF features two valves that allow you to divide your garden into independent areas. Set different irrigation schedules for the lawn, flowerbeds or vegetable beds and enjoy the perfect humidity for each corner. The device offers two modes, including irrigation mode (a strong stream of water for deep root irrigation) and mist mode (a gentle cooling mist, ideal for plants that require delicate care).

Automation based on weather forecast

Connect an optional soil sensor (up to 2 sensors per controller) and let the system water your plants on its own when it detects a drop in humidity. What's more, the built-in water flow meter records usage for the past 10 days, and the app will notify you when the battery is low, as well as when there are failures or leaks.

Thoughtful design

The body of the controller is an IP54-rated housing, resistant to dust, splashes and UV radiation. The integrated filter removes up to 35% of contaminants, and can withstand water pressure up to 35 kg/cm². A sealed battery flap prevents moisture from entering.

Included

- irrigation controller
- hub
- mounting tape
- spare rubber pad
