VITURE XR Luma Pro Glasses (size M)

VITURE XR Luma Pro are the flagship XR (Extended Reality, augmented reality) glasses that redefine the concept of immersion. They offer high-end 1200p displays with near 4K quality, brightness of up to 1,000 nits, great color reproduction and a large field of view for incredibly sharp and realistic images. Then there's the stunning sound from the Harman speakers, diopter adjustability and wide device compatibility. This is a piece of equipment that will delight both avid gamers and professionals who expect the highest quality for work and entertainment.

Image as vivid

The Luma Pro glasses are equipped with the latest Sony 0.68" micro-OLED (Organic Light Emitting Diode) displays and provide up to 1200p resolution with near 4K quality. Advanced optimization guarantees incredible sharpness and rich detail, and a field of view of as much as 52° enhances the impression of depth and space. It's ideal for gaming, movies and text work. Immerse yourself in a

game or the world of your favorite TV series and experience unforgettable emotions!

Brightness and colors that delight

With a maximum brightness of 1,000 nits, the Luma Pro provides a clear image even in harsh lighting conditions. You can also adjust the display to your surroundings, gaining unmatched comfort both in a dark room and in bright sunlight. What's more, the DeltaE parameter (Delta Error, the difference in color reproduction measured against a standard) 2 ensures that colors are natural and faithfully reproduced. From the warm tones of a sunset to the finest nuances of shades in games, every detail is rendered with remarkable accuracy.

Fully customizable vision

The ability to adjust the diopter down to -4.0D means that even people with visual impairments can use the Luma Pro comfortably - without the need to wear additional glasses or lenses. In addition, the IPD (Interpupillary Distance, the distance between the pupils) adjustment allows the device to be even better suited to the individual user's needs. In addition, the electrochromic coating allows instant dimming of the image for full immersion.

Premium sound

The Harman-developed audio system offers a rich, detailed soundstage that perfectly complements the high-quality picture. Clear dialogue, deep bass and clear highs make both music and effects in games or movies sound natural and engaging. It's sound that enhances the realism of the experience and allows you to become even more immersed in the virtual world!

Comfort for the whole day

Flexible arms, adjustable angle and soft, ergonomic nose pads in three sizes guarantee comfort even when wearing the glasses for hours. The improved design of the Luma Pro model ensures lightness and durability, and the materials used are pleasant to the touch and durable. All this allows you to enjoy exceptional comfort regardless of the shape of your face!

Software that makes a difference

With the SpaceWalker platform, you can easily set up a multi-screen work or entertainment environment on any platform - Google Play store, App Store, Windows and macOS are at your disposal. What's more, the built-in magnetometer minimizes image drift, and the unique Real-Time 2D-to-3D Conversion technology transforms movies and games into 3D experiences. Now in your own home you can feel like you're in the center of exciting events! Go off to conquer space or dive to the very bottom of the ocean - with Luma Pro, nothing limits you.

Made for gamers

The Luma Pro goggles are compatible with multiple platforms - from Android and iOS smartphones, to Nintendo Switch and Switch 2 consoles, to Windows and macOS computers. The device supports remote play and popular cloud platforms for smooth, responsive gameplay. Get ready for an unforgettable experience and discover a new dimension of fun!

Greater spatial awareness

The Luma Pro model uses 3DoF (Three Degrees of Freedom) technology, which enables precise tracking of head movements in three planes. As a result, the projected image responds smoothly to every movement, creating a natural and immersive experience when watching movies, playing games or working in the XR environment. The built-in front RGB (Red Green Blue, the standard color description model) camera supports these features, enhancing the sense of realism and allowing you to better adjust the content displayed to your position.

Design that catches the eye

The modern, minimalist design gives the glasses a unique character. The Luma Pro model also stands out with dynamic lighting effects that you can configure according to your preferences. All this adds up to a design that immediately catches the eye!

Included

- XR glasses
- Interchangeable nose pads (three sizes: 1, 2, 3) x3
- USB-C cable with magnetic connector (1.2 m)
