

Freewell filter set for DJI O4 Air Unit Pro

Model: FW-O4-STD

Manufacturer: FREEWELL

EAN: 4897143170570

Product Code: 806539

R1,776

Freewell filter set for DJI O4 Air Unit Pro

The ND filter set from Freewell is an indispensable accessory for drone owners using the DJI O4 Air Unit Pro. In the set you will find four filters - ND8, ND16, ND32 and ND64 - which allow you to effectively reduce the amount of light entering the lens in sunny conditions. With them, you'll capture smooth, cinematic shots with faithful colors and proper exposure. The filters are made of high-quality optical glass, and are designed to be lightweight, durable and fit perfectly on the camera - without affecting the operation of the gimbal. This is the choice for discerning filmmakers who want to extract the maximum potential from their DJI O4 Air Unit Pro.

Dedicated fit and full compatibility

The filters were designed specifically with the DJI O4 Air Unit Pro in mind, which means not only a perfect fit, but also safety and stability during flight. Thanks to the precise design, the installation and removal of the filters is quick and intuitive, and the whole thing works perfectly with the design

of the FPV camera, without disturbing its aerodynamics or the work of the gimbal.

Exposure control in all conditions

The kit includes four filters with different optical density values - ND8, ND16, ND32 and ND64 - allowing you to flexibly adjust the recording parameters to the light level. On sunny days, you'll reduce the risk of overexposure, achieving more natural motion blur and the smoothness you expect from professional aerial shots.

High-quality optical glass and natural colors

Freewell uses premium optical glass in its filters, which guarantees exceptional clarity and faithful color reproduction. True Color technology eliminates unwanted discoloration and maintains full sharpness of detail - without compromising quality, even in the most demanding scenes.

Maximum safety and easy operation

Each filter has been made to weigh as little as possible, which is crucial for FPV systems. The ultra-lightweight design doesn't disturb the balance of the gimbal or in-flight stability, allowing you to focus solely on the shot. Protective coatings on the surface of the filters protect them from dust, scratches and fingerprints. Their rugged construction makes them perfect for the field, and they are as comfortable as possible to use for both insertion and storage. They are a reliable choice for intensive outdoor FPV filming.

Included

- ND8 filter
- ND16 filter
- ND32 filter
- ND64 filter
- protective case for filters
- cleaning cloth
