

FNIRSI NVS-40 digital night vision device with 4K HD recording

Model: NVS-40

Manufacturer: FNIRSI

EAN: 5907085527246

Product Code: 806826

R2,282

FNIRSI NVS-40 digital night vision device with 4K HD recording

The FNIRSI NVS-40 is a digital night vision device with 4K recording and up to 36 MP image capture. The device allows observation in total darkness at distances of up to 300 meters, thanks to its adjustable 850 nm IR illumination and 6x digital zoom. It has a 3-inch IPS screen, an 18650 battery with USB-C charging, and a preview and playback function. It works in two modes - day and night - and allows convenient data export to a computer.

High image quality regardless of conditions

The device uses a CMOS sensor also used in car cameras, which translates into the ability to record video in 4K resolution. In addition, the night vision device is capable of taking images with a —

resolution of up to 36 megapixels, providing a high level of detail and clarity regardless of lighting conditions. Moreover, it operates in two modes - day and night. In day mode, it allows observation of distant objects from 2 meters. In night mode, it allows observation of a range of up to 300 meters thanks to the built-in IR. This feature works well for wildlife observation, patrols or field operations at night.

Customize its operation to suit your needs

The device offers 7 levels of IR light intensity. This makes it possible to adjust the illumination power depending on the distance and environmental conditions. Manual focus adjustment additionally allows fine-tuning the image, which improves the visibility of details in difficult conditions. In addition, the image can be digitally zoomed from 1× to 6×. The zoom function allows you to zoom in on the object you are observing without moving, which increases safety and comfort, especially in the field.

Refined design

The device is equipped with a 3" IPS display with HD resolution. It allows not only real-time viewing, but also playback of recorded video and photos directly on the screen, eliminating the need for an external monitor. The FNIRSI NVS-40 is powered by an 18650 battery and supports fast charging via a USB-C port. A full charge provides up to 8 hours of use, making the device ready for prolonged use in the field without the need for frequent charging.

More capabilities

The device has a microSD card slot for up to 32 GB, allowing you to record and save data directly to the card. In addition, the night vision menu can be switched to one of nine available languages. In addition, the housing has a thread for tripod mounting, which allows the night vision device to be stably positioned for long-term observation. The ability to mount a wrist strap increases mobility and safety during transport and work in difficult terrain.

Included

- digital night vision device

- USB charging cable
- 18650 lithium battery
- storage bag
- user manual

Manufacturer	Fnirsi
Model	NVS-40
Voltage	3.7V (18650 battery)
Charging voltage	5V/1A
Charging port	USB-C
Display	3" IPS
Temperature	-5 ~ 40°C
Humidity	0-80%
Dimensions	136 x 153 x 56 mm
Weight	approx. 265 g
Digital zoom	6x
Lens diameter	25 mm

Observation range in low light 2 m - ∞

Night observation range up to 300 m
