UNI-T UT387E metal detector

The UNI-T UT387E is a handy device that allows you to quickly and accurately detect hidden items in walls, such as metal, wood or live electrical wires. With its color screen, voice function and simple interface, the UT387E greatly facilitates repair, assembly and installation work. It is the ideal tool for professionals as well as DIYers looking for reliable support for home projects.

Effective material detection

The device can detect ferrous metals at depths of up to 100 mm, non-ferrous metals up to 80 mm, live wires up to 40 mm, and wooden parts up to 38 mm. The UT387E automatically recognizes the type of material and indicates its presence with clear visual and voice signals, minimizing the risk of accidentally drilling through vital components.

Intuitive operation and comfort

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The device is equipped with a 2.4-inch color screen that presents real-time results clearly. A built-in voice system assists operation in low-visibility conditions, and an automatic shut-off function after a period of inactivity saves energy. The UT387E is powered by a powerful rechargeable lithium-ion battery, charged via USB - making it extremely convenient for everyday use.

Robust design for special tasks

The UT387E case is designed for intensive use - robust, ergonomic and lightweight, it is perfect for both professional applications and home renovations. Its compact size and light weight (151.4 g) make it easy to fit the device into a tool bag or work clothing pocket.
