One, Xbox Series X|S and PS4, this kit will give you an unforgettable experience in the most popular racing simulators such as Forza, F1 or Assetto Corsa. In addition, the dedicated app allows you to fully customize the steering wheel to suit your needs.

Feel the power of a racing car

An advanced 3.2Nm servo motor with direct-drive technology and an aerospace-grade conductive glide ensures instant response to every steering wheel movement and reliable signal transmission. As a result, you'll feel every bump in the track, cornering resistance, and realistic force feedback for better lap times and increased driving immersion.

Control worthy of a professional

The 270mm D-shaped ergonomic steering wheel is covered with high-quality synthetic leather to ensure a stable grip even during the longest sessions. The detachable design makes it easy to transport and store the set. With Formula 1-style shift paddles with microswitches and 17 fully programmable buttons, you'll gain full control of your vehicle without having to reach for a keyboard or controller.

Precision that doesn't disappoint

Magnetic pedals with Hall-effect technology provide exceptional precision and durability thanks to the absence of mechanical components subject to wear. The high-precision linear braking system responds to every foot pressure, and the adjustable angle of the pedal panel allows you to adjust the position to your preference for comfort during hours of racing.

Intelligent Cooling

The advanced Intelligent Temperature Control 2.0 system with built-in temperature sensor monitors and automatically adjusts engine operation in real time. Tests have shown that during a 48-hour session the temperature does not exceed 50°C, while older models can reach up to 80°C, guaranteeing stable performance even during the most intense rallies.

Playing on multiple platforms
