

IPL epilator ANLAN 02- ATMY52-ORE

Model: 02-ATMY52-ORE

Manufacturer: ANLAN

EAN: 6977254876764

Product Code: 807407

R3,303

IPL Depilator ANLAN 02-ATMY52-ORE

ANLAN 02-ATMY52-ORE IPL Depilator is an advanced device that combines several functions. By using light pulses of different wavelengths, it is possible not only to remove hair, but also to improve skin firmness and reduce acne lesions. In the first phase of depilation, the device should be used every 1-2 weeks to effectively break the hair growth cycle. After about 8 weeks, it is enough to perform treatments every 4-6 weeks to maintain the effect of smooth skin.

Three modes of operation

The device offers three modes of operation to suit different skin care needs. Hair removal (HR) mode, based on light with a wavelength of 610-1200 nm, reaches the hair follicle, effectively inhibiting hair growth. Skin rejuvenation mode (SR), using the 530-650 nm range, stimulates collagen production, improving skin firmness and texture. On the other hand, the anti-acne mode (AR), based on the 415-500 nm wavelength, has an antibacterial effect, helping to treat

imperfections.

Faster and more thorough epilation

With an enlarged light emission field of 3.72 cm², the device can cover up to 1,241 cm² of skin per minute. This means that epilation not only becomes more effective, but also much faster. The use of an IGBT chip allows the device to emit a flash every 0.18 seconds, and the five-flash function further increases the device's speed without sacrificing precision.

Comfortable treatment without irritation

The sapphire contact-based cooling technology used in the device allows the skin temperature to be maintained at 8°C even during intensive work. This makes treatments completely safe and comfortable, with no burning sensation or discomfort. Double ventilation and efficient heat dissipation further enhance the safety of use.

Intelligent working modes - tailored to your needs

The ANLAN epilator works in both automatic and manual modes. The automatic flash mode is ideal for working on large areas such as the legs - just move the device over the skin and the light pulses will be emitted automatically. For precise areas of the body, such as the face or underarms, you can switch to manual mode, which allows for spot treatment.

Easy operation

The device is equipped with a clear LED display that makes it easy to control the selected modes and intensity level. With its ergonomic design and compact size, the epilator fits comfortably in the hand and is also great for traveling. The kit comes with a practical storage case and safety glasses to ensure safety during treatments.

Included

- epilator
- power cable
