Freewell Neutral Density ND16 Filter for OSMO 360

The Freewell ND16 is a neutral density filter designed for the DJI Osmo 360 camera. It reduces the amount of light entering the lens by 4 stops, which is particularly useful when recording in bright, sunny environments. This allows for smoother shots with a natural motion blur effect, without the need to increase the shutter speed.

Preserving natural colors

Despite reducing light, the ND16 filter does not distort colors – the image remains true to life, with well-rendered tones and contrast. This is a good solution for those who want to achieve a more cinematic look for their shots without compromising image quality.
