QCY HT18 LITE Titanium TWS Earbuds

The QCY MeloBuds N70 Lite are advanced TWS wireless earbuds that combine high-quality sound—certified by Hi-Res Audio Wireless—with LDAC codec support and adaptive noise cancellation down to -56 dB. Thanks to dual drivers and DualCore Acoustic technology, they deliver a more detailed, balanced sound with clear frequency separation. They last up to 10 hours on a single charge and up to 50 hours with the charging case, allowing you to use them for days on end. The package is rounded out by Bluetooth 6.0, the QCY app, and an IPX5 water resistance rating.

DualCore Acoustic System - precise and balanced sound

The DualCore Acoustic system uses two drivers responsible for different frequency ranges, resulting in significantly better sound quality. The ring-shaped dynamic driver delivers powerful, deep bass and natural vocals, while the piezoelectric unit ensures clear and detailed high frequencies.

Additionally, a special acoustic guide separates the frequency bands, reducing distortion and —

improving instrument separation. In practice, this means a clearer sound where every element of the track is more audible.

Hi-Res Audio Wireless and LDAC - more detail in wireless sound

The headphones support the LDAC codec and are Hi-Res Audio Wireless certified, meaning they transmit significantly more data than standard solutions. As a result, the sound retains more detail, better dynamics, and a more natural sound. The difference is particularly noticeable in the high frequencies and in more complex tracks, where standard codecs often lose detail. This is the solution for those who want to listen to high-quality music without wires.

Adaptive ANC up to -56 dB - effective noise reduction

QCY PureSilenz technology uses advanced sensors and microphones that analyze ambient sounds and automatically adjust the noise reduction level. The earbuds can suppress noise down to -56 dB, effectively blocking out the sounds of public transportation, the office, or the street. The system operates dynamically, so you don't need to manually adjust settings when your environment changes. This translates to greater listening comfort and better focus in any situation.

3 AI-powered microphones - clear calls in any conditions

Each earbud is equipped with a set of microphones supported by AI algorithms that improve call quality. The system focuses on the user's voice while reducing background noise and interference. Additionally, a wind-reduction solution has been implemented, which is particularly useful during outdoor calls. This ensures clear and natural communication, regardless of the environment.

Up to 50 hours of battery life with the case

The earbuds offer up to 10 hours of playback (without ANC), allowing for all-day use. The charging case extends the total battery life to up to 50 hours, meaning you'll need to charge them much less frequently. This is especially useful when traveling or during heavy use. With ANC enabled, battery life is up to 7 hours or up to 35 hours with the case.

Comfort, fit, and IPX5 water resistance

The set includes 5 sizes of silicone ear tips (XS, S, M, L, XL), allowing you to precisely adjust the earbuds to your ear. Soft, double-layered silicone tips ensure a secure fit and comfort even during extended use, and the proper fit enhances sound isolation and improves ANC performance. What's more, the MeloBuds N70 Lite are designed to stay securely in your ears—even when you're moving around a lot—and the IPX5 rating means they're resistant to sweat and splashes, so you can listen to music worry-free during workouts or in rainy conditions.

Bluetooth 6.0 - Stability and Convenience

The Bluetooth 6.0 module ensures fast and stable transmission with reduced latency during playback. What's more, the Fast Pair feature streamlines pairing with Android devices. You can also connect the earbuds to two devices simultaneously and switch between them effortlessly. Answer an important call, then go back to your show on your laptop!

Convenient controls

The MeloBuds N70 Lite are equipped with touch controls that let you, for example, skip tracks, answer or reject calls, enable ANC mode, or activate the voice assistant. What's more, when you take the earbuds out of your ears, playback will automatically pause and then resume when you put them back in. You don't have to worry about missing a segment of your podcast or your favorite part of a song!

QCY App and Smart Features

The earbuds work with the QCY app, which lets you customize their settings to suit your individual needs. From the app, you can, for example, switch between noise-canceling modes, use pre-set EQ presets (or create your own), configure touch controls, update the software, and use the Find My Earbuds feature. You also have access to QCY HearX™, which creates a personalized sound profile based on a short hearing test.

Included

- QCY MeloBuds N70 Lite earbuds
- Charging case
