

Motorcycle intercom with EJEAS K1Pro+ recorder

Model: K1Pro+

Manufacturer: EJEAS

EAN: 5905156101968

Product Code: 809637

R4,155

EJEAS K1Pro+ motorcycle intercom with recorder

The EJEAS K1 Pro+ motorcycle intercom with recorder offers advanced Mesh 3.0 group communication, high-resolution image recording, and full smartphone integration. It allows you to talk, listen to music and navigation messages, and record your route in up to 2K quality with automatic recording protection when a collision is detected. A powerful battery provides up to 17 hours of intercom operation, and the Bluetooth 5.1 module ensures a stable connection to your smartphone and accessories. Mesh technology with increased signal penetration allows you to stay in touch even in challenging terrain, and support for up to 8 callers simultaneously makes the K1 Pro+ the perfect tool for group riding.

Stable communication in all conditions

The Mesh 3.0 technology used in the EJEAS K1 Pro+ provides significantly greater signal strength and better penetration of terrain obstacles than classic Bluetooth intercoms. This allows for smooth, clear communication even in tunnels, on winding mountain roads, in forests, or in heavy city traffic, where radio waves are usually suppressed. In open terrain, the intercom range is up to 1,000 meters, while in built-up areas it is around 500 meters. Support for eight users on the same channel allows the entire group to talk simultaneously and exchange information about road conditions in real time.

Dual chip system

The use of two independent audio processing systems allows for the parallel use of several audio sources without interrupting communication. In practice, this means that you can talk on the intercom while listening to music from your phone or FM radio, as well as receiving navigation messages. The music sharing feature allows you to transmit the song being played directly to your travel companions' intercoms, creating a shared soundscape for your ride. Five levels of microphone sensitivity adjustment and the ability to mute the microphone make it easy to adjust the headset to the noise, speed, and type of motorcycle.

Route and traffic event recording

The integrated camera with up to 2K video resolution and 12 MP photos records your ride in real time, allowing you to document your route, landscapes, and traffic situations without having to mount an additional camera on your helmet. The device allows you to record while riding and simultaneously view the image on your smartphone via the app, making it easy to frame and control the footage. If a collision is detected, the system automatically secures the recording and saves the exposure settings so that the key fragment is not overwritten. Recorded material can be quickly exported and shared on social media or sent to friends.

Fast Bluetooth 5.1 connection

The Bluetooth 5.1 module enables a stable connection to your smartphone and supports mobile functions without taking your hands off the handlebars. It allows you to control music playback, listen to navigation instructions, automatically answer incoming calls, and activate the voice assistant. This makes the intercom the motorcyclist's central communication panel, integrating

sound from multiple sources into a single audio system.

Easy recording management

The dedicated Roadcam app for iOS and Android allows wireless operation of the recorder via Wi-Fi. It provides real-time image preview, remote file management, recording download and playback, and quick sharing of materials. It also allows you to configure camera and device settings directly from your phone, simplifying operation on the go. The app can be downloaded from the App Store, Google Play, or as an APK package.

Thoughtful design for years of use

The high-capacity 2100 mAh battery provides up to 17 hours of continuous intercom operation or approximately 5.5 hours of simultaneous communication and video recording, which is equivalent to a full day of touring or a long motorcycle trip. The IP67-rated design protects the electronics from dust and heavy rain, allowing for use in changing weather conditions. The sturdy housing and helmet mount create a durable communication and recording system, ready for the demands of everyday riding and long motorcycle trips.

Included in the set

- intercom
- mounting clip
- Allen key
- headset
- USB-C charging cable
- 4 x Velcro strips
- SD card
- user manual
