

MINIS FORUM DEG1 Oculink docking station

Model: DEG1

Manufacturer: MINIS FORUM

EAN: 4897118836296

Product Code: 810710

R3,067

MINIS FORUM DEG1 Oculink docking station

The MINIS FORUM docking station is a compact solution designed to expand mini PCs with a full-size graphics card. It uses the Oculink 4i interface based on PCIe 4.0 x4, ensuring high bandwidth and a stable connection to the main unit. It's an easy way to increase your computer's performance without replacing the entire configuration.

PCIe 4.0 x4 interface - high bandwidth

The DEG1 uses a PCIe 4.0 x4 bus with a bandwidth of up to 64 GT/s. In practice, this means fast data transfer between the graphics card and the mini PC, which translates into less performance loss compared to a classic GPU installation in a desktop computer case. This allows you to harness the potential of modern graphics cards in a compact working environment.

Built-in signal amplifier – stable operation

The signal amplification chip ensures stable transmission at high speeds. The result is more reliable operation of the set under load, which is important when gaming, working with graphics, or rendering video. A stable connection reduces the risk of performance drops and communication problems between devices.

Complete freedom in choosing a graphics card

The open design does not limit the length of the graphics card. The station supports even very powerful models, such as the NVIDIA RTX 4090 or AMD RX 7900 XTX, which gives you great flexibility when building a gaming or workstation. You can choose a card that suits your needs, without compromising on a small case.

Compatibility with ATX and SFX power supplies

The DEG1 works with standard ATX and SFX power supplies. This allows you to choose a power source that matches the power of your graphics card. This solution makes it easier to configure your setup and allows you to better control the budget for the entire expansion.

Synchronization with computer startup

The station is equipped with a "Follow the Startup" function, which allows you to synchronize its operation with the startup of the main computer. In practice, this means convenience of use and no need to start the entire set separately, as well as more organized power management.

Compact and minimalist design

With dimensions of 185 × 50 × 2 mm and a simple, minimalist form, the station does not take up much space on your desk. The durable design fits well with modern workstations and gaming setups, while ensuring stable mounting of components.

Manufacturer	Minis Forum
Model	DEG1 Oculink
External interface	Oculink 4i (SFF-8612) ×1 (PCIe 4.0 x4)
Internal interface	PCIe x16 Slot ×1
Bandwidth	Up to 64GT/s
Compatible GPU cards	including NVIDIA RTX 4090 and AMD RX 7900 XTX
Dimensions	185 × 50 × 2 mm
Compatible PCs	Computers with Oculink port
