ZEUSLAP P15A 15.6" Portable Monitor

The ZEUSLAP P15A 15.6" Portable Monitor is a lightweight Full HD 1920×1080 IPS display with a 120 Hz refresh rate and 250 nits of brightness, designed for mobile work and everyday use. Equipped with USB-C 3.1 ports supporting video output (DisplayPort Alt Mode) and a mini HDMI port, it allows you to easily connect a laptop, smartphone, or gaming console. The IPS panel offers wide 178° viewing angles, and a 1200:1 contrast ratio ensures a clear image in various conditions. Its light weight of approximately 550 g and slim design make the monitor ideal as a secondary screen for travel or hybrid work.

Smooth visuals for everyday use

A 120 Hz refresh rate translates to noticeably smoother content display, which is evident when scrolling through web pages, working with documents, or watching videos. A 3 ms response time minimizes motion blur, ensuring the image remains clear in fast-moving scenes. Full HD resolution

provides sufficient detail for office work and multimedia. Combined with a 1200:1 contrast ratio, the screen delivers a consistent and clear image without excessive brightness or darkness.

IPS panel and accurate color reproduction

The IPS panel provides wide 178° viewing angles, making it easy to use the monitor from various positions. Color coverage of approximately 66% sRGB (approx. 47% NTSC) means the screen is best suited for basic applications such as office work, web browsing, or watching movies. This ensures content is legible and visually comfortable to view. This solution aligns well with the device's mobile nature.

Portability and a second screen always at hand

The compact 15.6-inch size and slim chassis make the monitor easy to take with you to work, school, or on the go. Its light weight makes it easy to carry, and its simple design allows you to quickly set up a workspace anywhere. The monitor can function as a second screen in extended or mirrored display mode, which helps organize your work. This is particularly useful when working with multiple windows or during presentations.

Connectivity and Compatibility

The inclusion of USB-C 3.1 ports with video support and a mini HDMI port offers great flexibility for connecting various devices. The monitor works with laptops, consoles, and select smartphones that support desktop mode. The ability to transmit video and power over a single USB-C cable simplifies setup and reduces cable clutter. In practice, this means faster connection and more convenient everyday use.

Power and Practical Use

The monitor requires a 5V 3A power supply, which means that not every USB port on a laptop will be able to provide sufficient power. For weaker ports, it may be necessary to use an external power adapter or a power bank with Power Delivery support. This is important information when planning a mobile workstation. This helps avoid situations where the screen does not operate with full stability.
